# 1 Introduction

.....  
This documentation describes the configuration of the stamps in PLOSSYS netdome and the PDF Tools pdfstamp/pdfstamphft.

purpose

.....  
This documentation is intended for users who want to configure stamps for PLOSSYS netdome or configure and use the PDF Tools pdfstamp/pdfstamphft.

target group

.....  
This chapter deals with the following topics:

in this chapter

Topic	Page
Conventions in this Documentation	8
Overview of Contents	9

.....

## Conventions in this Documentation

path specifica-  
tion

.....

The path information given in this manual is relative to the installation directory of pdfstamp/pdfstampft and PLOSSYS netdome. The path information is indicated in Windows notation only in most cases. This corresponds to the UNIX directory structures unless noted otherwise.

.....

typography

.....

The following table lists the typographical conventions employed in this documentation.

<b>Typographical Convention</b>	<b>Meaning</b>
Consolas	File names, paths, commands, menu items, keywords, special values, short scripts and examples
<i>Consolas italic</i>	Parameters; variables that have to be replaced by current values
Consolas small	More extensive scripts and examples

.....

## Overview of Contents

.....  
 This documentation has two parts: a description and a reference. The first part describes the functionality and the installation process using figures, step-by-step-procedures and explanatory texts. The second part serves as a detailed reference guide, containing configuration settings, keywords etcetera.

structure

.....  
 The description deals with the following topics:

description

Chapter 2, *General*, page 13, provides an introduction into the different ways how documents can be stamped at SEAL Systems, describes the basic terms and lists the requirements.

Chapter 5, *pdfstamp/pdfstamphft - Further Configuration and Operations*, page 62, explains the configuration steps that are identical for all ways of stamping.

Chapter 5, *pdfstamp/pdfstamphft - Further Configuration and Operations*, page 62, explains the additional configuration steps and actions available for the stamping via PLOSSYS netdome.

Chapter 5, *pdfstamp/pdfstamphft - Further Configuration and Operations*, page 62, explains the additional configuration steps and actions available for the stamping with pdfstamp/pdfstamphft.

Chapter 6, *Stamping Using a Stamp Template*, page 80, explains configuration steps for the stamping using a stamp template.

.....  
 The reference contains the following chapters:

reference

- Chapter 7, *Parameter of pdfstamp/pdfstamphft - Reference*, page 91, lists the command line parameters of pdfstamp/pdfstamphft.
- Chapter 8, *Configuration - Reference*, page 129, lists the settings in the different configuration files.

.....  
 Appendix A, *Examples of the Stamp Layout File*, page 161, provides some examples for the configuration of stamps.

appendix

.....  
 At the end of the documentation, a bibliography, terminology list, abbreviation list and index are included.

directories

**Description**

## 2 General

---

.....  
This chapter deals with the following topics:

in this chapter

Topic	Page
Stamp Programs and Configuration	14
stamp types	16
Stamp Texts	17
Graphic Stamp	19
Requirements	20

.....

## 2.1 Stamp Programs and Configuration

.....

programs This documentation describes how to stamp with the following programs from SEAL Systems:

- PLOSSYS netdome
- pdfstamp/pdfstamphft

.....

Stamp Configura- tion Basically, the configuration of the stamps is identical for the programs. Differences will be indicated at the correspondent situations.

.....

stamp layout file In the stamp layout file, you configure the layout of the stamp boxes and texts, for example, the size and the color, and the position of the stamp.

→ *Stamp Layout File (.stp)*, page 130

.....

stamp template pdfstamp/pdfstamphft can also stamp a PDF file by means of another PDF file, a stamp template. In this case, a stamp layout file and stamp texts are not required.

.....

PDF configura- tion file The PDF configuration file specifies how the PDF output file will be generated.

→ *PDF Configuration File (.db)*, page 149

.....

pdfstamp/ pdfstamphft pdfstamphft is the HFT variant of pdfstamp.

.....

PLOSSYS net- dome PLOSSYS netdome always uses the HFT method.

.....

background knowledge - HFT HFT is a new method for calling functions whereby the Adobe Library is initialized using a different way.

HFT is the seminal way and supports the automatic repairing as Adobe Acrobat Reader. PDF files with XFA can be processed with HFT.

The "disadvantage" of HFT is that the protection mechanism are evaluated so that a document that is protected against changes can no longer be stamped before output.

.....

 hint - stamp editor As an alternative to the manual changing of the configuration files, you can configure the stamps by using the graphical user interface, Stamp Editor, from SEAL Systems.

.....

*To be continued*

## Stamp Programs and Configuration, Continuation

.....  
With `pdfstamp/pdfstamphft`, you can configure up to 256 stamp boxes and texts.

number of stamps

With PLOSSYS `netdome`, the maximum of stamp boxes and texts is specified in the `PLS_STAMP_MAX` environment variable. This will be set when starting PLOSSYS `netdome`. Default is 100 stamps.

.....  
With the `tiffstamp` program from SEAL Systems, you can stamp TIFF files. For more information, refer to `[TIFFSTAMP_TEC]`.

TIFF

## 2.2 stamp types

Stamp	..... A stamp is a text or a graphic that is applied onto an existent document. .....
watermark	..... A watermark is a stamp that is applied behind the document. .....
stamp types	..... The following stamp types are supported:
opaque	• A „normal“, opaque stamp hides the contents of the document.
transparent colored	• A transparent colored stamp hides the contents of the document but the colors are transparent so that you can see the contents through the stamp.
transparent gray	• A transparent gray stamp hides the contents of the document but the gray-scales are transparent so that you can see the contents through the stamp.
gray-simulated	• A gray-simulated stamp hides the contents of the document. The gray-scales and colors are simulated by Black and White.
real invisible	• A real invisible stamp is invisible on all backgrounds but you can search for the text, for example.
flagpage	..... In contrast to the other stamps, the flagpage may be output outside the document as well. .....

## 2.3 Stamp Texts

.....  
 You can specify the texts for the text stamps in PLOSSYS netdome via the following ways:

PLOSSYS netdome

→ *Pass a Stamp Text via a Header*, page 65

→ *Preset the Stamp Text*, page 40

.....  
 You can specify the texts for the text stamps in pdfstamp/pdfstamphft via the following ways:

pdfstamp/  
pdfstamphft

→ *Specify a Stamp Text Directly*, page 66

→ *Pass a Stamp Text via a Stamp Text File*, page 64

→ *Pass a Stamp Text via a Header*, page 65

→ *Preset the Stamp Text*, page 40

.....  
 The available ways for specifying the stamp texts may be combined. The texts specified with `-tn` take priority to the texts that are passed in the header with stamp texts and in the stamp text file. The default texts in the stamp layout file have the lowest priority.

 hint - combination, priority

.....  
 A text stamp may contain 256 characters.

text length

.....  
 For multiline stamp texts, you configure an extra stamp text for each line and assign these to the same stamp box.

multiline

→ *Group Stamp Texts*, page 43

.....  
 As of version 3.83 of pdfstamp/pdfstamphft, you can specify a line break with `\n` or `\r` in the stamp text. In order that these strings are handled as line breaks, set `TX_LINEBREAK` to `Y` in the stamp text file.

line break

.....  
 Via `BO_WIDTH`, the maximum width of the stamp is specified. The line is broken at the word boundary. The value of `BO_HEIGHT` is adjusted accordingly. The line distance is specified via the `TX_LINEDISTANCE` option. If the text is wider than `BO_WIDTH` after the line break, the text size will be reduced if `BO_ADAPT_TEXT_TO_FRAME` has been set to `Y`. Otherwise, the text goes beyond the width specified by `BO_WIDTH` and `BO_WIDTH` is increased accordingly.

size with line break

.....  
 The stamps may contain variables which are replaced during stamping.

variables

..... *To be continued*

## Stamp Texts, Continuation

### Unicode

.....  
In order to generated stamp texts containing Unicode characters, the following environment variables must be set:

- SEALFONTS=%PLSTOOLS%\fonts
- SEAL\_DEFAULTCODEPAGE=UTF8

The font used in the stamps must be Unicode-enabled, for example, -30001.  
.....

## 2.4 Graphic Stamp

---

A graphic stamp is a graphic that is applied onto the document.	graphic stamp
With PLOSSYS netdome, GKS metafiles can be used as graphic stamps.	PLOSSYS net- dome
With pdfstamp/pdfstamphft, GKS metafiles and JPEG files can be used as graphic stamps. Additionally, pdfstamp/pdfstamphft can stamp PDF files as stamp templates.	pdfstamp/ pdfstamphft

---

## 2.5 Requirements

pdfstamp/  
pdfstamphft

.....  
pdfstamp and pdfstamphft belong to the PDF Tools from SEAL Systems.  
.....

reference

.....  
The other PDF Tools and the general settings and information concerning the PDF Tools are described in [PDF\_TOOLS].  
.....

## 3 Stamp Configuration

.....  
 This chapter describes the configuration in the stamp layout file which is used both by PLOSSYS netdome and pdfstamp/pdfstamphft:

in this chapter

Topic	Page
Configure a Text Stamp	22
Configure a Graphic Stamp	23
Configure the Reference Point of a Stamp Box	24
Configure an Opaque Stamp	27
Configure a Transparent Colored Stamp	28
Configure a Transparent Gray Stamp	29
Configure a Gray-Simulated Stamp	30
Configure a Watermark	31
Configure the Stamp Background	32
Configure an Invisible Stamp	34
Draw a Frame Around the Stamp Box	36
Rotate a Stamp Box	38
Configure the Pages to Be Stamped	39
Preset the Stamp Text	40
Align a Stamp Text to the Stamp Box	41
Group Stamp Texts	43
Configure the Repetition of a Stamp	44
Configure the Character Width and Spacing	46

.....  
 In Appendix A, *Examples of the Stamp Layout File*, page 161, you will find some examples of the configuration in the stamp layout file.

## Configure a Text Stamp

instructions

This way you configure a text stamp:

Step	Action
1	Configure the properties of the stamp box in the section for the stamp box: [box]
2	Configure the properties of the stamp text in the section for the stamp text: [text]
3	In the [STAMP_DEFINITION] section, specify the section names of the stamp text and the stamp box: [STAMP_DEFINITION] BOX_DEFINITIONS box TEXT_DEFINITIONS text
4	In the section for the stamp box, specify the stamp text as contents: [box] BO_CONTENTS text

 hint - default

If the defaults are valid for all items of a stamp text, the correspondent [text] section can be empty but it must exist.

 example

The Released text stamp is applied onto the document:

Extract of the stamp layout file:

```
[STAMP_DEFINITION]
TEXT_DEFINITIONS      Text_0
BOX_DEFINITIONS       Box_0

[Text_0]
...
TX_TEXT                "Released"
...
[Box_0]
...
BO_CONTENTS           Text_0
...
```

## Configure a Graphic Stamp

With PLOSSYS netdome, the graphic file to be stamped on all jobs of a output queue is stored in the %PLSPLT% directory. requirement

With pdfstamp/pdfstamphft, the graphic file is stored in the directory of the stamp layout file.

This is how you configure a graphic stamp: instructions

Step	Action
1	Configure the properties of the stamp box in the section for the stamp box: [box]
2	In the [STAMP_DEFINITION] section, specify the section name of the stamp box: [STAMP_DEFINITION] BOX_DEFINITIONS box
3	In the section for the stamp box, specify the graphic file: [box] BO_FRAME graphic   <b>Caution</b> - pdfstamp/pdfstamphft: With pdfstamp/pdfstamphft, deactivate the BO_CONTENTS item in the section for the stamp box in order that the BO_FRAME item is used. [box] # BO_CONTENTS ...

The seal\_logo.met graphic stamp is applied onto the document:  example

Extract of the stamp layout file:

```
[STAMP_DEFINITION]
BOX_DEFINITIONS      Box_0
[Box_0]
...
BO_FRAME             seal_logo.met
...
```

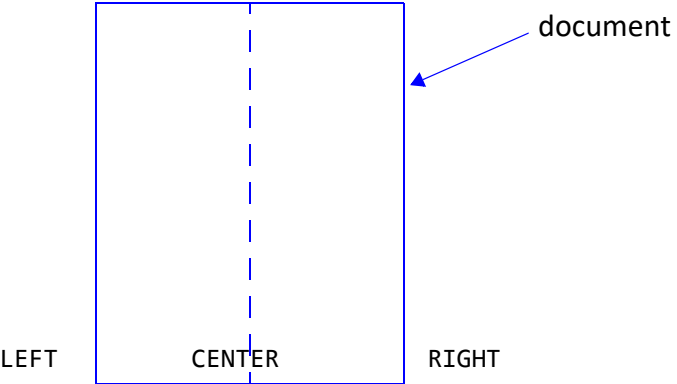

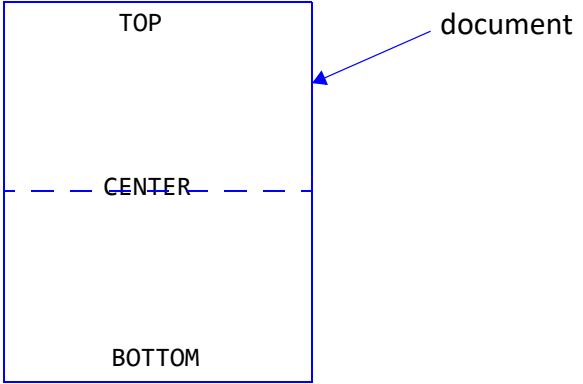

## Configure the Reference Point of a Stamp Box

reference point .....  
 The position of a stamp box orient itself on the reference point which is relative to the border of the document or the printable area.

requirement .....  
 The text or graphic stamp has been configured:  
 → *Configure a Text Stamp*, page 22  
 → *Configure a Graphic Stamp*, page 23

instructions .....  
 This is how you configure the reference point of a stamp box:

Step	Action
1	<p>In the section for the stamp box, configure where the reference point of the stamp box is to be located corresponding to the document's horizontal:</p> <pre data-bbox="564 869 979 927">[box] BO_ALIGNMENT_HOR align</pre> 
2	<p>In the section for the stamp box, configure where the reference point of the stamp box is to be located corresponding to the document's vertical:</p> <pre data-bbox="564 1473 932 1532">[box] BO_ALIGNMENT_VER align</pre> 

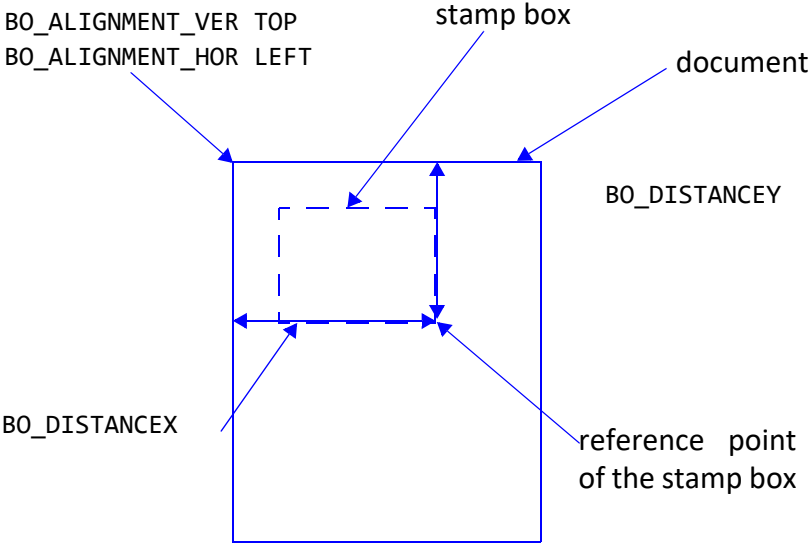

..... *To be continued*

## Configure the Reference Point of a Stamp Box, Continuation

This is how you configure the reference point of a stamp box, continuation:

instructions, cont'd

Step	Action
3	<p>In the section for the stamp box, configure the distance between the stamp box and the position specified with BO_ALIGNMENT_HOR and BO_ALIGNMENT_VER:</p> <pre data-bbox="373 589 756 672">[box] BO_DISTANCEX  distance BO_DISTANCEY  distance</pre> <p>In case of:  BO_ALIGNMENT_VER TOP  BO_ALIGNMENT_HOR LEFT</p> 
4	<p>In the section for the stamp box, optionally configure if the reference point is to be oriented to the border of the printable area instead of the border of the document:</p> <pre data-bbox="373 1406 778 1464">[box] BO_ORIGIN  VISIBLE_AREA</pre>

..... To be continued

## Configure the Reference Point of a Stamp Box, Continuation

 example

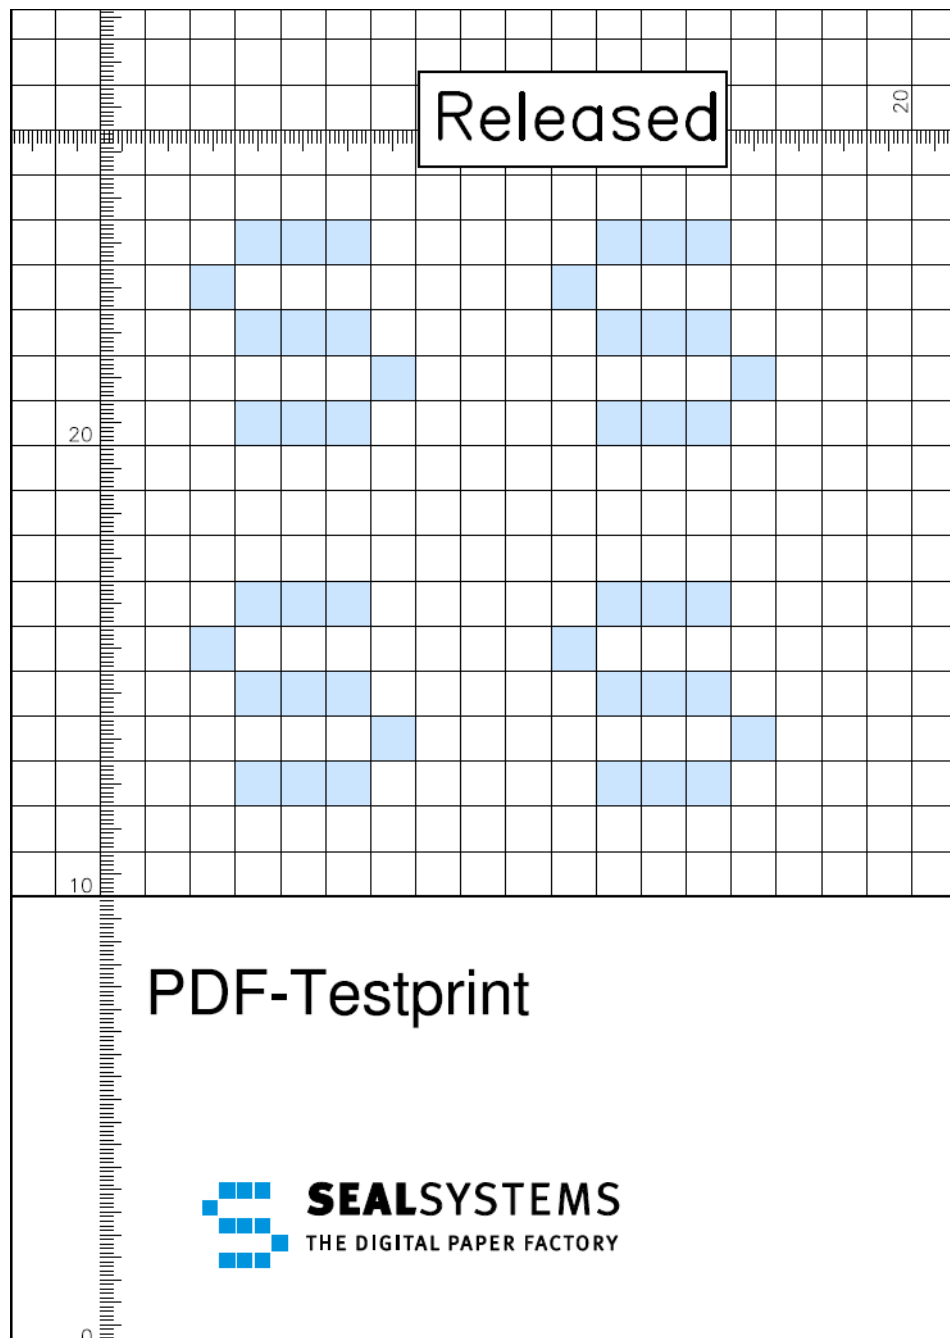

The reference point is positioned at the top center with a distance to the right of 5 cm and a distance downwards of 3 cm:

Extract of the stamp layout file:

```

...
BO_ALIGNMENT_HOR      CENTER
BO_ALIGNMENT_VER      TOP
BO_DISTANCEX          0.050
BO_DISTANCEY          0.030
...

```

## Configure an Opaque Stamp

The colors and grayscales of a opaque stamp are displayed, the document contents are covered.

opaque

The text or graphic stamp has been configured:

requirement

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

This is how you configure that the stamp is applied opaque:

instructions

Step	Action
1	In the section for the stamp box, configure that the stamp is to be applied opaque: <code>[box]</code> <code>BO_CREATION STAMP</code>

The stamp covers the document contents:

 example

Extract of the stamp layout file:

```
...
BO_CREATION          STAMPS
...
```

## Configure a Transparent Colored Stamp

transparent colored

The colors and grayscales of a transparent colored stamp are displayed, the document contents show through.

requirement

The text or graphic stamp has been configured:

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

The PDF\_GRAYSTAMP environment variable has been set to color.

instructions

This is how you configure that the stamp is applied transparent colored:

Step	Action
1	In the section for the stamp box, configure that the stamp is to be applied transparent colored: <pre>[box] BO_CREATION GRAY_STAMP</pre>

 example

The stamp is applied as transparent colored stamp onto the document:

Extract of the stamp layout file:

```
...
BO_CREATION          GRAY_STAMP
...
```

## Configure a Transparent Gray Stamp

The colors or grayscales of a transparent colored stamp are displayed in grayscales, the document contents show through.

transparent gray

The text or graphic stamp has been configured:

requirement

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

This is how you configure that a stamp is applied transparent gray:

instructions

Step	Action
1	In the section for the stamp box, configure that the stamp is to be applied transparent gray: <code>[box]</code> <code>BO_CREATION GRAY_STAMP</code>
2	Set the PDF_GRAYSTAMP environment variable to gray. Alternative with pdfstamp/pdfstamphft: When calling pdfstamp/pdfstamphft, specify the <code>-graystamp</code> parameter with gray.

The stamp is applied as transparent gray stamp onto the document:

 example

Extract of the stamp layout file:

```
...
BO_CREATION          GRAY_STAMP
...
```

environment variable:

```
PDF_GRAYSTAMP=gray
```

## Configure a Gray-Simulated Stamp

gray-simulated

The colors or grayscales of a stamp are simulated by black and white, the document contents show through.

requirement

The text or graphic stamp has been configured:

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

instructions

This way, you configure a gray-simulated stamp:

Step	Action
1	In the section for the stamp box, configure that the stamp is to be applied gray-simulated: <code>[box]                  BO_CREATION GRAY_STAMP</code>
2	Set the PDF_GRAYSTAMP environment variable to <code>simulated</code> . Alternative with <code>pdfstamp/pdfstamphft</code> : When calling <code>pdfstamp/pdfstamphft</code> , specify the <code>-graystamp</code> parameter with <code>simulated</code> .

 example

The stamp is applied as gray-simulated stamp onto the document:

Extract of the stamp layout file:

```
...
BO_CREATION          GRAY_STAMP
...
```

environment variable:

```
PDF_GRAYSTAMP=simulated
```

## Configure a Watermark

The watermark is output behind the document, the document contents are not covered.

watermark

The text or graphic stamp has been configured:

requirement

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

This is how you configure a watermark:

instructions

Step	Action
1	In the section for the stamp box, configure that the stamp is to be applied as watermark behind the document: <pre>[box] BO_CREATION WATERMARK</pre>

The stamp will be applied as watermark behind the document.

 example

Extract of the stamp layout file:

```
...
BO_CREATION          WATERMARK
...
```

## Configure the Stamp Background

background

The stamp background can be displayed in the following variants:

- **TRANSPARENT:** The document shows through the stamp background. The stamp foreground, that means the stamp text for example, does not show through.
- **OPAQUE:** The whole stamp including its border covers the document.
- **BLANKED:** The graphic elements of the stamp have a white border within which the document is covered completely. In the other part of the stamp, the document shows through.

 hint - graphic stamp

With graphic stamps, BLANKED has the same effect as TRANSPARENT.

 **Caution** - not supported

White areas with the variants OPAQUE and BLANKED are created by overprinting with white color, not by clipping the graphics elements that are to be covered. Therefore, these two variants are not supported by all device types. With pen plotters, for example, only TRANSPARENT is possible as stamp background.

Transparent stamps are supported with restrictions. For example, watermarks can not be used in files generated by gXconvert.

requirement

The text or graphic stamp has been configured:

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

instructions

This is how you configure the stamp background:

Step	Action
1	In the section for the stamp box, configure how the background of the stamp is to be applied: <code>[box]  BO_BACKGROUND background</code>

..... *To be continued*

## Configure the Stamp Background, Continuation

The background of the stamp covers the document contents completely, that means it is opaque:

Extract of the stamp layout file:

```
...  
BO_BACKGROUND      OPAQUE  
...
```

## Configure an Invisible Stamp

invisible

Invisible stamps are invisible on all backgrounds but can be selected.

background knowledge

In scanned documents which were processed with OCR the found texts cover invisible the document at the original positions. Thereby, these texts can be searched in the document and selected.

requirement

The text or graphic stamp has been configured:

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

instructions

This is how you configure an invisible stamp:

Step	Action
1	In the used PDF configuration file, check if the font is configured as invisible. PDF.font: <i>nr</i> INVISIBLE <i>pdo</i>
2	In the section for the stamp text, configure that an invisible font is to be used: [ <i>text</i> ] TX_FONT <i>nr</i>
3	In the section for the stamp box, configure that no frame is to be drawn: [ <i>box</i> ] BO_BORDER        N
4	In the section for the stamp box, configure that the background of the stamp is to be transparent. [ <i>box</i> ] BO_BACKGROUND    TRANSPARENT

 hint - invisible fonts

The INVISIBLE render mode in the font definition in the PDF configuration file is responsible for the visibility of the font. By changing the render modus, further fonts can be set invisible.

→ *Items of the PDF Configuration File*, page 150

..... *To be continued*

## Configure an Invisible Stamp, Continuation

---

The stamp is applied onto the document but invisible:

Extract of the PDF configuration file:

```
PDF.font:    -4001  Helvetica  INVISIBLE  helvetica.pdo
```

Extract of the stamp layout file:

```
[Text_0]
...
TX_FONT      -4001
...
[Box_0]
...
BO_BORDER    N
BO_BACKGROUND TRANSPARENT
...
```

---

## Draw a Frame Around the Stamp Box

frame

The frame is a rectangle around the stamp box which can be than surrounded by a visible frame line for example.

 **Caution** -  
graphic stamp  
requirement

Frames are only supported for text stamps and not for graphic stamps.

The reference point of the stamp box has been configured:  
→ *Configure the Reference Point of a Stamp Box*, page 24

instructions

This is how you draw a frame around a stamp box:

Step	Action
1	In the section for the stamp box, configure that a frame is to be drawn around the stamp box: <pre>[box] BO_BORDER      Y</pre>
2	In the section for the stamp box, optionally configure the distance from the stamp box to the frame: <pre>[box] BO_OFFSETX    offset BO_OFFSETY    offset</pre> 
3	In the section for the stamp box, optionally configure the color of the frame: <pre>[box] BO_COLOR      color</pre>
4	In the section for the stamp box, optionally configure the line width of the frame: <pre>[box] BO_LWSC       Linewidth</pre>

..... *To be continued*

## Draw a Frame Around the Stamp Box, Continuation

.....  
The stamp is applied with a red frame in a distance of 3 mm and a line width of 2 mm:

Extract of the stamp layout file:

```
[Box_0]
...
BO_OFFSETX      0.003
BO_OFFSETY      0.003
BO_BORDER       Y
BO_COLOR        2
BO_LWSC         0.002
...
```

## Rotate a Stamp Box

requirement

The reference point of the stamp box has been configured:

→ *Configure the Reference Point of a Stamp Box*, page 24

instructions

This is how you configure that the stamp box is applied rotated:

Step	Action
1	In the section for the stamp box, configure the rotation angle for the stamp box: <pre>[box]   BO_ANGLE    angle</pre>

 example

The stamp box will be rotated clockwise by 20°:

Extract of the stamp layout file:

```
[Box_0]
...
BO_ANGLE    -20.0
...
```

## Configure the Pages to Be Stamped

The text or graphic stamp has been configured:

requirement

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

This is how you configure the pages to be stamped:

instructions

Step	Action
1	In the section for the stamp box, configure the pages to be stamped: <code>[box]            BO_PAGES_TO_STAMP    pages</code>

With PLOSSYS netdome, you can additionally specify if only the first page is to be stamped; if the back sides are to be stamped differently to the front sides and if the page numbers are to be related to the set collation:

 hint - further possibilities

→ *Stamp Only the First Page*, page 56

→ *Stamp the Front and Back Sides Differently*, page 57

→ *Relate Pages to Collection Set*, page 58

With pdfstamp/pdfstamphft, you can additionally specify the pages to be stamped:

→ *Specify the Pages to Be Stamped*, page 70

The stamp is applied onto the odd pages:

 examples

Extract of the stamp layout file:

```
[Box_0]
BO_PAGES_TO_STAMP    odd
```

The stamp is applied onto each 5th page starting with page 3:

Extract of the stamp layout file:

```
[Box_0]
BO_PAGES_TO_STAMP    3MOD5
```

## Preset the Stamp Text

requirement

The text stamp has been configured:

→ *Configure a Text Stamp*, page 22

instructions

This is how you configure a default for a stamp text:

Step	Action
1	In the section for the stamp text, configure the text that is to be preset: <pre>[text] TX_TEXT      text</pre>

 example

The Status unknown text is output as text for the stamp unless another stamp text is passed explicitly:

Extract of the stamp layout file:

```
[Text_0]
...
TX_TEXT      "Status unknown"
...
```

## Align a Stamp Text to the Stamp Box

Relative to the reference point of the stamp box, you configure the alignment and the starting point of the stamp text.

alignment and starting point

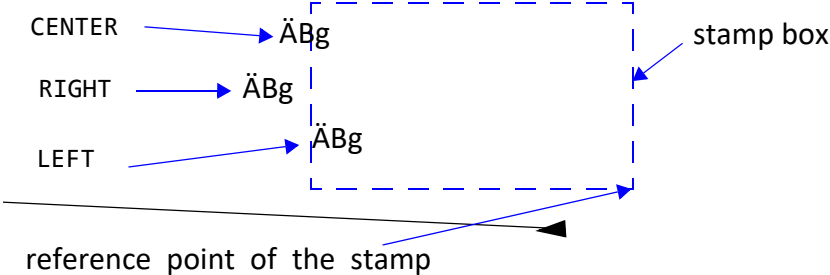

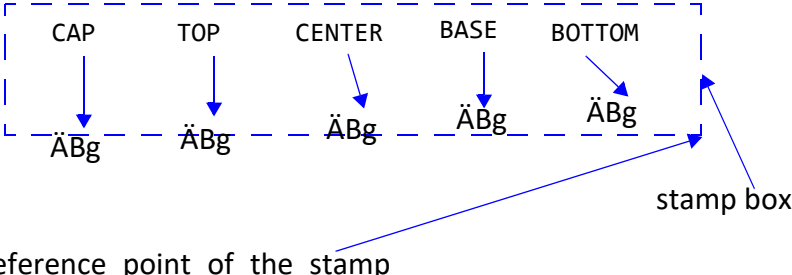

The reference point of the stamp box has been configured:

requirement

→ *Configure the Reference Point of a Stamp Box*, page 24

This is how you position a stamp text relatively to the reference point of the stamp box:

instructions

Step	Action
1	<p>In the section for the stamp text, configure the horizontal alignment corresponding to the stamp box:</p> <pre data-bbox="373 815 788 873">[text] TX_ALIGNMENT_HOR align</pre> 
2	<p>In the section for the stamp text, configure the vertical alignment corresponding to the stamp box:</p> <pre data-bbox="373 1285 788 1344">[text] TX_ALIGNMENT_VER align</pre> 

To be continued

## Align a Stamp Text to the Stamp Box, Continuation

instructions,  
cont'd

This is how you position a stamp text relatively to the reference point of the stamp box, continuation:

Step	Action
3	<p>In the section for the stamp text, configure the vertical and horizontal distance to the reference point of the stamp box:</p> <pre>[text] TX_OFFSETX    offset TX_OFFSETY    offset</pre>

### example

The stamp text starts with 1 cm as vertical distance to the reference point of the stamp box and with 2 cm as horizontal distance. The starting point of the stamp text is located on its base line:

Extract of the stamp layout file:

```
[Text_0]
...
TX_ALIGNMENT_HOR    RIGHT
TX_ALIGNMENT_VER    BASE
TX_OFFSETX          0.02
TX_OFFSETY          0.01
...
```

## Group Stamp Texts

You can compile multiple stamp texts in a stamp box in order to apply multiline stamps onto the document for example. multiline

The text stamp to be grouped have been configured: requirement

→ *Configure a Text Stamp*, page 22

This is how you group multiple stamp texts to a stamp box: instructions

Step	Action
1	In the section for the stamp box, configure the section names of the text stamps to be grouped: <pre>[box] BO_CONTENTS    text1 text2 ... textn</pre>

The Text1 and Text2 text stamps are applied as two lines in a stamp box:  example

Extract of the stamp layout file:

```
[STAMP_DEFINITION]
TEXT_DEFINITIONS    Text_1 Text_2
BOX_DEFINITIONS     Box_1
...
[Text_1]
...
TX_ALIGNMENT_HOR    CENTER
TX_ALIGNMENT_VER    TOP
TX_TEXT             "Released"
...
[Text_2]
...
TX_ALIGNMENT_HOR    CENTER
TX_ALIGNMENT_VER    BASE
TX_TEXT             "2013-12-10"
...
[Box_1]
...
BO_CONTENTS         Text_1 Text_2
...
```

## Configure the Repetition of a Stamp

repetition

A stamp box can be applied repeatedly in a line or even all over the whole document. For this, a vector or two vectors will be configured. If a vector is specified, the stamp box is repeated along the direction configured by the vector as often as the correspondent document borders are reached. If two vectors are specified, the stamp box is repeated along both directions as often as all document borders are reached.

requirement

The text or graphic stamp has been configured:

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

instructions

This is how you configure that the stamp box is repeated:

Step	Action
1	If the stamp box is to be repeated in horizontal direction, you configure the vector coordinates for the horizontal direction in the section for the stamp box: $[box] \\ BO\_REP\_X \quad x \quad y$
2	If the stamp box is to be repeated in vertical direction, you configure the vector coordinates for the vertical direction in the section for the stamp box: $[box] \\ BO\_REP\_Y \quad x \quad y$

*To be continued*

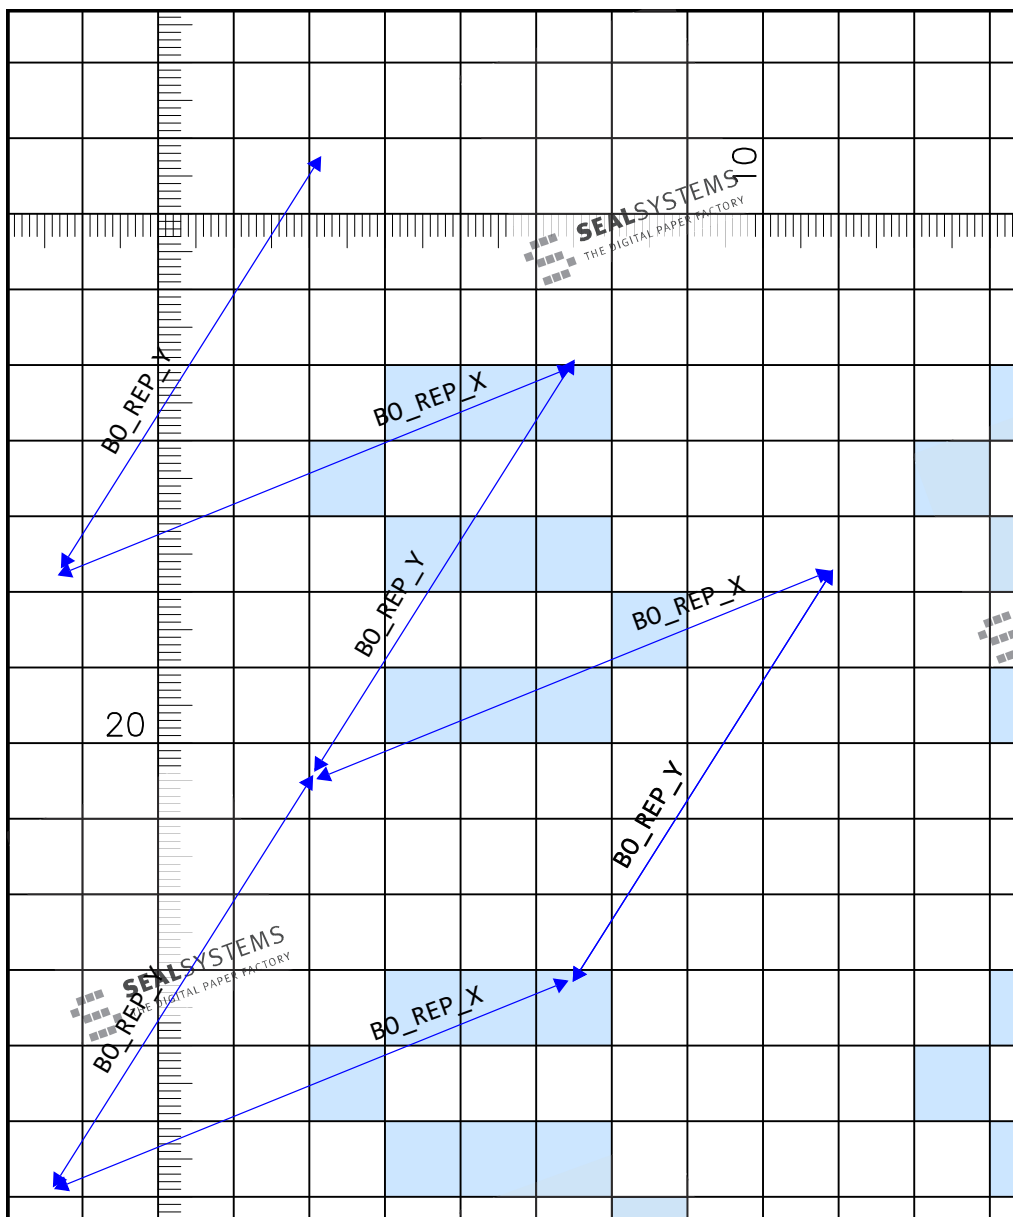

## Configure the Repetition of a Stamp, Continuation

The stamp is repeated over the whole document:

Extract of the stamp layout file:

```
[Box_0]
...
BO_ALIGNMENT_HOR    LEFT
BO_ALIGNMENT_VER    BOTTOM
BO_ANGLE            20.0
BO_DISTANCEX        0.01
BO_DISTANCEY        0.01
BO_FRAME            seal_logo.met
BO_REP_X            0.06 0.12
BO_REP_Y            0.10 0.05
...
```

## Configure the Character Width and Spacing

requirement

The text stamp has been configured:

→ *Configure a Text Stamp*, page 22

instructions

This is how you configure the character width and the spacing of the stamp text:

Step	Action
1	In the section for the stamp text, configure the factor for the character width: <code>[text]</code> <code>TX_EXPANSION    <i>factor</i></code>
2	In the section for the stamp text, configure the factor for the additional space between two characters: <code>[text]</code> <code>TX_SPACING      <i>factor</i></code>

 hint - mirrored

With negative values in TX\_EXPANSION and TX\_SPACING, the stamp text is applied mirrored.

 example

The stamp text is output with the double character width and the threefold spacing:

Extract of the stamp layout file:

```
[Text_1]
...
TX_EXPANSION    2.0
TX_SPACING      3.0
...
```

## 4 PLOSSYS netdome - Further Configuration and Operations

This chapter describes what you can configure additionally when stamping with PLOSSYS netdome and how you stamp with PLOSSYS netdome:

in this chapter

Topic	Page
Stamp a Document	48
Stamp Over All Output Queues	49
Queue-Specific Stamp	50
Job-Specific Stamp	51
Pass a Stamp Text via a Header	65
Use a Variable in a Stamp Text	54
Rotate and/or Scale the Stamps with the Document	55
Stamp Only the First Page	56
Stamp the Front and Back Sides Differently	57
Relate Pages to Collection Set	58
Pass a Graphic File With a Job	59
Use a Variable in a GKS Metafile	60
Apply a Flagpage Onto a Document	61

For information about PLOSSYS netdome header, refer to [PLOSSYS-  
\_PARAM\_TEC].

reference

For information about the PLOSSYS netdome configuration file, `plossys.cfg`, refer to [NETDOME\_TEC].

## Stamp a Document

---

### stamping

.....  
PLOSSYS netdome stamps a document

- if a general stamp layout file has been configured  
→ *Stamp Over All Output Queues*, page 49
  - or if a stamp layout file has been configured for the output queue to which the document is output  
→ *Queue-Specific Stamp*, page 50
  - or if a stamp layout file is passed with the output job  
→ *Job-Specific Stamp*, page 51
  - and if default stamp texts are available or stamp texts are passed with the output job files.
- .....

hint -  
no stamps

.....  
Stamps will only be applied if stamp boxes are configured in the stamp layout file.  
.....

## Stamp Over All Output Queues

You can configure stamps for all documents independent of the output queues.

general

This is how you stamp generally over all output queues:

instructions

Step	Action
1	Configure the stamps in the stamp layout file %PLSPLT%\general.stp.
2	Configure the name of the stamp layout file in plossys.cfg in the [SYSTEM] section with the STPFILE item: <pre>[SYSTEM]   ...   STPFILE general.stp   ...</pre>
3	Restart PLOSSYS netdome.

The stamps are identical for all output queues and configured in stamp.cfg:

 example

Extract of plossys.cfg:

```
[SYSTEM]
  ...
  STPFILE      stamp.stp
  ...
```

## Queue-Specific Stamp

queue-specific

You can configure separate stamps for each output queue. The settings are valid for all jobs output to this output queue.

instructions

This is how you stamp specific for an output queue:

Step	Action
1	Configure the stamps for the output queue, <i>queue</i> , in the stamp layout file, %PLSPLT%\specific.stp.
2	Configure the name of the stamp layout file in plossys.cfg in the section for the output queue with the STPFILE item: <pre>[queue] ... STPFILE specific.stp ...</pre>  hint - default: By default, the stamp layout file with the same name as the output queue and the .stp extension is taken, that means <i>queue.stp</i> for the output queue, <i>queue</i> .
3	Restart the output queue.

 hint - deactivate

In order to deactivate stamping for an output queue, specify STPFILE "".

 example

The stamps are identical for all output queues except printer1 and printer3 and are configured in stamp.cfg: Documents output to printer1 are not stamped. The stamps for the output to printer3 are configured in printer3\_stamp.cfg:

Extract of plossys.cfg:

```
[SYSTEM]
...
STPFILE      stamp.stp
...
[printer1]
...
STPFILE      ""
...
[printer3]
...
STPFILE      printer3_stamp.stp
...
```

## Job-Specific Stamp

You can configure separate stamps for each output job.

job-specific

For passing a job-specific stamp layout file, it is required that the correspondent gates are configured this way that they save the passed file in the %PLSDATA%\plotserv\associated directory using the correct name. With converters, this behavior is preset.

requirement

Example of the required items for the HPGL gate:

 example - HPGL gate

In %PLSROOT%\server\plotserv\gates\hpgl\hpglgate.def:

```
...
[Maingate]
  ...
  stamp = stp
  ...
[FileExtOptional]
  ...
  stamp = stp
  ...
...
```

This is how you stamp specific for an output job:

instructions

Step	Action
1	Configure the stamps for the output job, <i>jobid</i> , in the stamp layout file, <i>specific.stp</i> .
2	Pass the stamp layout file together with the other output job files as <i>jobid.stp</i> to the %PLSDATA%\plotserv\associated directory.  Alternative:  Save the stamp layout file into %PLSPLT% and specify the name of the stamp layout file into the header of the output job as extension at the stamp text: \$ PLS_STAMP_n == "\$specific\$text"
3	Restart the output queue.

If the job-specific stamp is a graphic stamp, you have to pass the correspondent graphic file together with the stamp layout file:

 hint - graphic stamp

→ *Pass a Graphic File With a Job*, page 59

..... *To be continued*

## Job-Specific Stamp, Continuation

.....  
The Excel document, test.xlsx, is stamped according to the stamp layout file, test.stp, the PLS\_STAMP\_3 stamp is stamped according to the stamp layout file, stamp3.stp:

Extract of the test.hed header:

```
$ PLS_STAMP_3 == "$stamp3.stp$Released"
```

The job files, test.xlsx, test.stp, test.hed and stamp3.stp are passed to PLOSSYS netdome.  
.....

## Pass a Stamp Text via a Header

The stamp texts can be passed in the header of the output job or specified in the default headers of the gates and so on.

header

The text stamp has been configured:

requirement

→ *Configure a Text Stamp*, page 22

This is how you use texts contained in a header as stamps:

instructions

Step	Action
1	In the header of the output job, enter the texts line-by-line: <code>\$ PLS_STAMP_n == "text"</code> <i>n</i> can be between 0 and 99.
2	Pass the header to PLOSSYS netdome together with the other job files.

In order to deactivate the default for a stamp text in the stamp layout file, enter `PLS_STAMP_n == ""` with the appropriate number, *n* in the header of the output job. Then, this stamp will not be applied.

 hint - default

If you want to use quotes „, and “ as special characters in a stamp text, you have to quote these by backslashes:

```
$ PLS_STAMP_0 == \„My text\“
```

 hint - quotes

The stamp texts are passed in the header:

```
...
$ PLS_STAMP_0 == "Released"
$ PLS_STAMP_1 == "2013-12-03"
$ PLS_STAMP_2 == "John Smith"
...
```

 example

## Use a Variable in a Stamp Text

variables

With PLOSSYS netdome, you can use PLOSSYS netdome-specific variables, header items or any environment variable in the stamp texts.

PLOSSYS netdome-specific

This is how you specify a PLOSSYS netdome-specific variable in such a way that its value is output:

`$Variable`

This is how you specify a PLOSSYS netdome-specific variable in such a way that the variable itself is output:

`$$Variable`

 example

The stamp 0 is to be applied with the `$PLS_PLOTTER=device` text:

`$ PLS_STAMP_0 == $$PLS_PLOTTER=$PLS_PLOTTER`

When outputting the document, for example, to the DesignJet output queue, the following is stamped onto the document:

`$PLS_PLOTTER=DesignJet`

environment variable

This is how you specify an environment variable in such a way that its value is output:

`%Variable%`

This is how you specify an environment variable in such a way that the variable itself is output:

`%%Variable%%`

 example

The stamp 2 is to be applied with the `%USERNAME% = user` text:

`$ PLS_STAMP_2 == "%USERNAME% = %USERNAME%"`

When, for example, the logged-on user, Smith, outputs the document, the following is stamped onto the document:

`%USERNAME% = Smith`

## Rotate and/or Scale the Stamps with the Document

The text or graphic stamp has been configured:

requirements

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

This is how you configure if the stamp is rotated and/or scaled together with the document:

instructions

Step	Action
1	In the stamp layout file in the section for the stamp box, configure if the stamp box is to be rotated with the document: <pre>[box] BO_ROTATE      ROTATE NOT_ROTATE</pre>
2	In the stamp layout file, configure the default if the stamp box is to be scaled with the document: <pre>SCALE_STAMP    YES NO</pre>
3	In the stamp layout file in the section for the stamp box, configure if the stamp box is to be scaled with the document: <pre>[box] BO_SCALE_BOX   YES NO</pre> <p> hint - default: SCALE_STAMP is used as default for BO_SCALE_BOX.</p>
4	Restart the output queue.

All stamp except Box\_3 are scaled with the document:

 example

Extract of the stamp layout file:

```
...
SCALE_STAMP      YES
...
[Box_3]
...
BO_SCALE_BOX     NO
...
```

## Stamp Only the First Page

multi-page

When stamping multi-page documents, you can configure that only the first page is to be stamped.

requirement

The text or graphic stamp has been configured:

→ *Configure a Text Stamp, page 22*

→ *Configure a Graphic Stamp, page 23*

instructions

This is how you configure that only the first page of multi-page documents is stamped:

Step	Action
1	In the header of the output job, enter the following: \$ PLS_ONLYFIRSTSTP == YES
2	Pass the header to PLOSSYS netdome together with the other job files.

 hint - further possibilities

In the stamp layout file, you can configure for each stamp box onto which page the stamp is to be applied:

→ *Configure the Pages to Be Stamped, page 39*

 example

In the text.docx document, only the first page is to be stamped:

Extract of the test.hed header:

```
$ PLS_ONLYFIRSTSTP == YES
```

The job files, test.docx and test.hed, are passed to PLOSSYS netdome.

## Stamp the Front and Back Sides Differently

When stamping multi-page documents, you can configure that the front and back sides are to be stamped differently.

multi-page

This is how you configure different stamps for the front and the back sides:

instructions

Step	Action
1	Configure the stamps of the front sides in the stamp layout file <i>name.stp</i> .
2	Configure the stamps of the back sides in the extra stamp layout file <i>name.pts</i> . The stamp layout file for the back sides must have the same name as the stamp layout file for the front sides but <i>pts</i> as extension instead of <i>stp</i> .
3	In the header of the output job, enter the following: \$ PLS_DIFBACKSTP == YES
4	Restart the output queue.

In the *test.docx* document, the front and back sides are to be stamped differently. The stamps for the front sides are configured in *stamp.stp*:

 example

Extract of the *test.hed* header:

```
$ PLS_DIFBACKSTP == YES
```

The stamps for the back sides are configured in *stamp.pts*: The stamp layout files, *stamp.stp* and *stamp.pts* are available in PLOSSYS netdome. The job files, *test.docx* and *test.hed*, are passed to PLOSSYS netdome.

## Relate Pages to Collection Set

requirement

The text or graphic stamp has been configured:

→ *Configure a Text Stamp*, page 22

→ *Configure a Graphic Stamp*, page 23

instructions

This is how you configure that the pages evaluated for stamping relate to the set collation:

Step	Action
1	In the stamp layout file in the section for the stamp box, configure that the page numbers for stamping are to be related to the set collation: <pre>[box] BO_PAGES_DOMAIN      SET</pre>

 example

The stamp is applied onto the odd pages of the set collation:

Extract of the stamp layout file:

```
[Box_0]
BO_PAGES_TO_STAMP    odd
BO_PAGES_DOMAIN      SET
```

## Pass a Graphic File With a Job

The graphic stamp has been configured:

requirement

→ *Configure a Graphic Stamp*, page 23

For passing graphic files as graphic stamps, it is required that the correspondent gates are configured this way that they save the passed file in the %PLSDATA%\plotserv\associated directory using the correct name. With converters, this behavior is preset.

Example of the required items for the HPGL gate:

 example -  
HPGL gate

In %PLSR00T%\server\plotserv\gates\hpgl\hpglgate.def:

```

...
[Maingate]
...
stampmet = stm
...
[FileExtOptional]
...
stampmet = stm
...

```

This is how you pass a graphic file with the job files:

instructions

Step	Action
1	In the stamp layout file in the section for the stamp box, configure that the graphic file is passed with the job: <pre> [box] ... BO_FRAME * ... </pre>
2	Restart the output queue.
3	Pass the graphic file to PLOSSYS netdome together with the other job files.

In the test.docx document, the passed graphic file, logo.met, is applied as graphic stamp:

 example

Extract of the stamp layout file:

```

[Box_1]
...
BO_FRAME *
...

```

The graphic file, logo.met, is passed as test.stm as job file to PLOSSYS netdome.

## Use a Variable in a GKS Metafile

variables in GKS metafile

In GKS metafiles, you can specify fix texts and all header items as variable, for example, PLS\_PLOTID. The specified header items are replaced by its current values.

requirement

The graphic stamp has been configured:  
→ *Configure a Graphic Stamp*, page 23

instructions

This is how you use variables in GKS metafiles:

Step	Action
1	In the GKS metafile, specify the GKSM keyword, the text coordinates, the text length and the text or, with \$, the header item.

 example

The GKS metafile, stamp.met, is applied as graphic stamp. In the graphic stamp, the values of some header items are output:

Extract of stamp.met:

```

...
GKSM 13 36 -0.2500 0.35000 12PLS_PLOTOPT:
GKSM 13 36 0.00000 0.35000 12$PLS_PLOTOPT
GKSM 13 37 -0.2500 0.30000 13PLS_PLOTSIZE:
GKSM 13 37 0.00000 0.30000 13$PLS_PLOTSIZE
...

```

## Apply a Flagpage Onto a Document

---

.....  
In contrast to the other stamps, the flagpage may be output outside the document as well.

flagpage

.....  
The configuration and the application of a flagpage via PLOSSYS netdome is described in [NETDOME\_TEC].

reference

## 5 pdfstamp/pdfstamphft - Further Configuration and Operations

in this chapter

This chapter describes what you can configure additionally when stamping with pdfstamp/pdfstamphft and how you stamp with pdfstamp/pdfstamphft:

Topic	Page
Stamp a Document	63
Pass a Stamp Text via a Stamp Text File	64
Pass a Stamp Text via a Header	65
Specify a Stamp Text Directly	66
Use a Variable in a Stamp Text	67
Change the Displayed Page Number	69
Specify the Pages to Be Stamped	70
Keep PDF/A in the Output File	71
Mark a Stamp	72
Delete a Stamp	73
Generate a Stamp As PDF Annotation	74
Reuse the Temporary Stamp File	75
Apply a Flagpage Onto a Document	76
Configure Format-Specific Stamps	78

stamp template

With pdfstamp/pdfstamphft, you can also stamp by using stamp templates.

→ *Stamping Using a Stamp Template*, page 80

## Stamp a Document

.....  
 The stamp layout file containing the configured stamps and the PDF configuration file are available. requirement

.....  
 This is how you stamp a document with pdfstamp/pdfstamphft: instructions

Step	Action
1	When calling pdfstamp/pdfstamphft, specify the stamp layout file with the <code>-stp</code> parameter, the PDF configuration file with the <code>-db</code> parameter and optionally further parameters: <pre>pdfstamp -f file -stp stpfile -db dbfile ...</pre>

.....  
 The document, `original.pdf`, is stamped according to the configuration in the stamp layout file, `default.stp`, and the PDF configuration file, `default.db`. The output file is named `stamped.pdf`:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-o stamped.pdf
```

 example

## Pass a Stamp Text via a Stamp Text File

### requirement

The stamp layout file containing the configured stamps and the PDF configuration file are available.

### instructions

This is how you use texts contained in a stamp text file as stamps:

Step	Action
1	In the stamp text file, <i>stamptextfile</i> , enter the texts line-by-line: <pre>text1 text2 text3 text4 ...</pre> <p>You can configure up to 100 stamps.</p>
2	When calling pdfstamp/pdfstamphft, specify the stamp text file, <i>stamptextfile</i> , with the <code>-txt</code> parameter: <pre>pdfstamp -f file -stp stpfile -db dbfile -txt stamptextfile</pre>

### example

The document, *original.pdf*, is stamped. The stamp texts are taken from the stamp text file, *stamps.txt*:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-txt stamps.txt
```

with the stamp text file, *stamps.txt*:

```
Released
2013-12-03
John Smith
```

## Pass a Stamp Text via a Header

.....  
 The stamp layout file containing the configured stamps and the PDF configuration file are available. requirement

.....  
 This is how you use texts contained in a header as stamps: instructions

Step	Action
1	In the header, <i>header</i> , enter the texts line-by-line: <code>\$ PLS_STAMP_<i>n</i> == "<i>textn</i>"</code> <i>n</i> can be between 0 and 99.
2	When calling <code>pdfstamp/pdfstampft</code> , specify the <i>header</i> header with the <code>-hed</code> parameter: <code>pdfstamp -f <i>file</i> -stp <i>stpfile</i> -db <i>dbfile</i> -hed <i>header</i></code>

.....  
 If you want to use quotes „, and “ as special characters in a stamp text, you have to quote these by backslashes:

```
$ PLS_STAMP_0 == \„My text\“
```

.....  
 The document, `original.pdf`, is stamped. The stamp texts are taken from the header, `stamps.hed`:

```
pdfstamp -f original.pdf -stp default.stp -db default.db -hed stamps.hed
```

with the header, `stamps.hed`:

```
...
$ PLS_STAMP_0 == "Released"
$ PLS_STAMP_4 == "2013-12-03"
$ PLS_STAMP_5 == "Smith"
...
```

## Specify a Stamp Text Directly

requirement

.....  
The stamp layout file containing the configured stamps and the PDF configuration file are available.  
.....

instructions

This is how you specify texts directly:

Step	Action
1	When calling pdfstamp/pdfstamphft, specify the texts with the -tn parameter: <code>pdfstamp -f file -stp stpfile -db dbfile -tn "text"</code>

 example

.....  
The document, original.pdf, is stamped. The Released stamp text is specified directly:

```
pdfstamp -f original.pdf -stp default.stp -db default.db  
-t3 "Released"
```

## Use a Variable in a Stamp Text

With pdfstamp/pdfstamphft, you can use the following variables in the stamp texts: variables

Variable	Meaning
%PAGE%	Current page number in the document
%PAGES%	Total page number of the document
%DATE%	<p>the current date in the format specified by the PDF_DATE_FORMAT environment variable.</p> <p>With PDF_DATE_FORMAT, you can combine all format strings provided by the C++ strftime method, for example, %d for day, %B for month name; %H for hour or %M for minute</p> <p> example - PDF_DATE_FORMAT</p> <p>With set PDF_DATE_FORMAT = %dth of %B %H:%M, the current date and time is output with %DATE% in the format: 24th of July 15:26</p>
%DATEDE%	<p>Current date in the format: <i>dd.mm.yyyy</i></p> <p> example - 24.07.2022</p>
%DATEDEYY%	<p>Current date in the format: <i>dd.mm.yy</i></p> <p> example - 24.07.22</p>
%DATEUS%	<p>Current date in the format: <i>mm/dd/yyyy</i></p> <p> example - 07.24.2022</p>
%DATEUSYY%	<p>Current date in the format: <i>mm/dd/yy</i></p> <p> example - 07/24/22</p>

Do not use %PAGE% with PDF documents having many pages! For each page, a temporary PDF file with the stamps is generated. This file increases very quickly and, thereby, stamping takes a long time. If you do not use %PAGE%, the temporary DPF file will be re-used and must be imported only once. This saves space and computing time.

..... To be continued

## Use a Variable in a Stamp Text, Continuation

The document, original.pdf, is stamped. The Released stamp text is output with the current date:

```
pdfstamp -f original.pdf -stp default.stp -db default.db  
-t3 "Released %DATEDE%"
```

## Change the Displayed Page Number

The stamp layout file containing the configured stamps and the PDF configuration file are available.

requirement

This is how you change the displayed page number:

instructions

Step	Action
1	<p>When calling pdfstamp/pdfstamphft, specify the page number with which the page numbering is to be started with the <code>-startpagecount</code> parameter.</p> <pre>pdfstamp -f file -stp stpfile -db dbfile -startpagecount page</pre> <p> hint - %PAGE%:</p> <p>%PAGE% is set to the page number specified with <code>-startpagecount</code>.</p>
2	<p>When calling pdfstamp/pdfstamphft, optionally specify the page number which is to be used as total page count with the <code>-totalpagecount</code> parameter:</p> <pre>-totalpagecount total</pre> <p> hint - %PAGES%:</p> <p>%PAGES% is set to the total page number specified with <code>-totalpagecount</code>.</p>

Page numbers are stamped onto to the document, `original.pdf`. The page numbering is generated with the `t0` stamp text and the `%PAGE%` and `%PAGES%` variables. Because this document is to be output as document part, the page numbering is to start at page 17 and 100 is to be displayed as total page number. Then, the page numbering is displayed as "Page 17 of 100", "Page 18 of 100", and so on:

 example

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-t0 "Page %PAGE% of %PAGES%" -startpagecount 17
-totalpagecount 100
```

## Specify the Pages to Be Stamped

requirement

.....  
The stamp layout file containing the configured stamps and the PDF configuration file are available.  
.....

instructions

.....  
This is how you specify the pages to be stamped:  
.....

Step	Action
1	When calling pdfstamp/pdfstamphft, specify the pages to be stamped with the -p parameter: <code>pdfstamp -f file -stp stpfile -db dbfile -p pages</code>

 example

.....  
The document, test.pdf, is stamped. The first three pages are stamped:  
`pdfstamp -f test.pdf -stp default.stp -db default.db -p 1-3`  
.....

## Keep PDF/A in the Output File

.....

The stamp layout file containing the configured stamps and the PDF configuration file are available.

requirement

The following requirements must be fulfilled for the keeping of PDF/A:

- The ICC file, *srgb.icc*, must be available in the `%PLSTOOLS%\convcfg` directory.
- The `SEALRESOURCEPATH` environment variable must be set to the `%PLSTOOLS%\convcfg` directory.
- The input file must be conform to PDF/A.

.....

The conformance level of the output file is set to the conformance level of the input file that means, for example, if the input file is conform to PDF/A-2, the output file will be conform to PDF/A-2, too.

conformity level

.....

This is how you keep PDF/A for the output file:

instructions

Step	Action
1	When calling <code>pdfstamp/pdfstamphft</code> , specify with the <code>-forcepdfa</code> parameter that the output file is to be conform to PDF/A and an error message is to be output if this is impossible: <pre>pdfstamp -f <i>file</i> -stp <i>stpfile</i> -db <i>dbfile</i> -forcepdfa</pre>

.....

The document, `test.pdf`, is stamped. The output file, `stamped.pdf`, is to be conform to PDF/A like the input file:

```
pdfstamp -f test.pdf -stp default.stp -db default.db
-o stamped.pdf -forcepdfa
```

 example

## Mark a Stamp

requirement

The stamp layout file containing the configured stamps and the PDF configuration file are available.

instructions

This is how you mark stamps:

Step	Action
1	<p>When calling pdfstamp/pdfstamphft, specify the mark for the stamps with the -sti parameter:</p> <pre>pdfstamphft -f file -stp stpfile -db dbfile -sti mark</pre> <p> hint - default mark:</p> <p>When specifying -sti without value, the stamps get the default mark, SEALSTAMP.</p>

 example

The document, original.pdf, is stamped. The stamps get the to\_be\_deleted mark:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-sti to_be_deleted
```

## Delete a Stamp

.....  
 The stamps has been marked when stamping:

requirement

→ *Mark a Stamp*, page 72

.....

This is how you delete stamps:

instructions

Step	Action
1	When calling pdfstamp/pdfstamphft, specify the mark for the stamps to be deleted with the -d parameter: <pre>pdfstamphft -f file -d mark</pre>  hint - default mark: If you specify -d without value, the stamps with the default mark, SEALSTAMP, are deleted.

.....  
 From the document, original.pdf, the stamps marked with to\_be\_deleted are deleted:

 example

```
pdfstamp -f original.pdf -d to_be_deleted
```

.....

Adobe stamps are deleted with the -da parameter.

.....

 hint - Adobe stamp

## Generate a Stamp As PDF Annotation

requirement

The stamp layout file containing the configured stamps and the PDF configuration file are available.

instructions

This is how you generate stamps as PDF annotations:

Step	Action
1	When calling pdfstamp/pdfstamphft, specify with the -ma parameter that the stamps are to be generated as PDF annotations: <code>pdfstamp -f file -stp stpfile -db dbfile -ma</code>
2	When calling pdfstamp/pdfstamphft, optionally specify with the -af parameter with which properties the PDF annotations are to be generated: <code>-af properties</code>

 example

The document, test.pdf, is stamped. The stamp is configured in the stamp layout file, default.stp, and contains the Released text. The stamp is generated as PDF annotation that may be printed but not displayed:

```
pdfstamp -f test.pdf -stp default.stp -db default.db
-t0 "Released" -ma -af 100100
```

## Reuse the Temporary Stamp File

.....

If the sizes of sequential pages in the PDF file are equal or almost equal, the same temporary stamp file is used for stamping. For this page comparison, you can specify a tolerance. Default is 5 mm.

page comparison

.....

This is how you change the tolerance for the page comparison:

instructions

Step	Action
1	Set the PLS_PDF_TOLERANCE_IN_MM environment variable to the desired tolerance when comparing the pages. PLS_PDF_TOLERANCE_IN_MM= <i>tolerance</i>

.....

The document, `original.pdf`, is stamped. The temporary stamp file is to be reused if the sizes of the sequential pages differ by up to 8 mm:

```
PLS_PDF_TOLERANCE_IN_MM=8
pdfstamp -f original.pdf
```

 example

## Apply a Flagpage Onto a Document

flagpage In contrast to the other stamps, the flagpage may be output outside the document as well.

requirement The stamp layout file containing the configured stamps and the PDF configuration file are available.

instructions This is how you configure the layout of the flagpage:

Step	Action
1	Generate a flagpage configuration file and configure the position and the layout of the flagpage with the FP_* items within. → <i>Flagpage Configuration</i> , page 155   <b>Caution</b> - not supported: FP_GENERATE, FP_ROTATE and FP_UPVECTOR are not supported by pdfstamp/pdfstamphft.
2	When calling pdfstamp/pdfstamphft, specify the flagpage configuration file with the -fp parameter and the flagpage texts with the -fptxtn parameters: <pre>pdfstamp -f file -stp stpfile -db dbfile         -fp flagepagefile -fptxt1 txt1 ... -fptxtn txtn</pre>

### example

The document, original.pdf, is stamped. The output file is named flagged.pdf. It contains the flagpage, "John Smith 2013-10-11", according to the configuration in flagpage.cfg:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-o flagged.pdf -fp flagpage.cfg
-fptxt1 "John Smith 2013-10-11"
```

with the flagpage configuration file, flagpage.cfg

```
FP_POSITION      OUTSIDE
FP_SIDE          RIGHT
FP_ALIGNMENT     CENTER
FP_COLOR         2
FP_DISTANCEX    0.001
FP_DISTANCEY    0.001
FP_FONT          -855
FP_LINEWIDTH    0.0005
FP_SPACING       0.000
FP_TEXTSIZE     0.003
FP_CLEARBG      N
```

..... To be continued

## Apply a Flagpage Onto a Document, Continuation

generates flagged.pdf:

 example,  
continuation

## Configure Format-Specific Stamps

format comparison .....  
 The paper size of the document to be stamped is compared to the formats in the SIZE\_DESCRIPTION section from top to bottom.

comparison method .....  
 For the comparison, you can select between two methods:

- FirstFIT: As soon as the paper size fits completely into a format, the format is selected and the stamp settings having this format prefix are valid.
- FitExact: As soon as the paper size corresponds exactly to one format within a tolerance, the format is selected and the stamp settings having this format prefix are valid.

default .....  
 Unless an appropriate format is found, the default stamp settings are taken.

instructions .....  
 This is how you configure that the stamp is applied dependent on the format of the document:

Step	Action
1	Create the [SIZE_DEFINITIONS] section and configure there the different formats with their widths and lengths in meters: [SIZE_DEFINITIONS] <i>format width Length</i>
2	For the specified formats, create sections containing the stamp settings valid for the <i>format</i> format and configure there the format-specific stamp settings: [ <i>format\section</i> ]
3	Create the section without the format prefix and configure there the default stamp settings.
4	In the FIT_EXACT item without section, optionally configure which comparison method is to be used: NO: The FirstFit method is used. YES: The FitExact method is used.
5	In the TOLERANCE item without section, optionally configure the tolerance which is to be used when comparing the formats.

..... *To be continued*

## Configure Format-Specific Stamps, Continuation

Up to DIN A4, the Box\_1 stamp is output in black, with all other formats the Box\_2 stamp is output in red:

Extract of the stamp layout file:

```

[STAMP_DEFINITION]
TEXT_DEFINITIONS      Text_2
BOX_DEFINITIONS       Box_2
...
[Text_2]
TX_COLOR              3
...
[Box_2]
...
[SIZE_DEFINITIONS]
DINA4_P 0.210 0.297
DINA4_L 0.297 0.210
...
[DINA4_P\STAMP_DEFINITION]
TEXT_DEFINITIONS      Text_1
BOX_DEFINITIONS       Box_1
...
[DINA4_L\STAMP_DEFINITION]
TEXT_DEFINITIONS      Text_1
BOX_DEFINITIONS       Box_1
[DINA4_P\Text_1]
TX_COLOR              1
...
[DINA4_P\Box_1]
...
[DINA4_L\Text_1]
TX_COLOR              1
...
[DINA4_L\Box_1]
...

```

## 6 Stamping Using a Stamp Template

pdfstamp/  
pdfstamphft

Stamp templates are supported when stamping via pdfstamp/pdfstamphft.

stamp template

You can use any PDF file as stamp template. As an alternative, you generate a stamp template using pdfstamp/pdfstamphft:

→ *Generate a Stamp Template*, page 81

in this chapter

This chapter deals with the following topics:

Topic	Page
Generate a Stamp Template	81
Stamp a Document	82
Position the Stamp Template on the Document	83
Select Pages From the Stamp Template	84
Specify the Pages to Be Stamped	85
Apply the Stamp Template As Watermark	86
Keep PDF/A in the Output File	87
Replace a Text in the Stamp Template	88

## Generate a Stamp Template

.....  
 The layout of the stamp boxes and texts is configured in the stamp layout file, *stpfile*, requirement

→ *pdfstamp/pdfstamphft - Further Configuration and Operations*, page 62

.....  
 This is how you generate a PDF file as stamp template: instructions

Step	Action
1	When calling <code>pdfstamp/pdfstamphft</code> , specify the name under which the stamp template is to be saved with the <code>-o</code> parameter, the stamp layout file with the <code>-stp</code> parameter and the PDF configuration file with the <code>-db</code> parameter: <pre>pdfstamp -o <i>template</i> -stp <i>stpfile</i> -db <i>dbfile</i></pre>
2	When calling <code>pdfstamp/pdfstamphft</code> , optionally specify the width and height of the stamp template in meters with the <code>-x</code> and <code>-y</code> parameters: <pre>-x <i>width</i> -y <i>height</i></pre>
3	When calling <code>pdfstamp/pdfstamphft</code> , specify the stamp texts using one of the available ways: <pre>-hed <i>header</i>  -tn <i>textn</i>  -txt <i>textfile</i></pre>

.....  
 The stamp template, `released.pdf`, is generated from the stamp layout file, `default.stp`. The width of the stamp template is 5 cm and its height is 3 cm and the stamp template contains the Released text:

```
pdfstamp -o released.pdf -stp default.stp -db default.db  

-t0 "Released" -x 0.05 -y 0.03
```

 example

## Stamp a Document

### requirement

Any PDF file is available as stamp template or a stamp template has been generated with `pdfstamp/pdfstamphft`:

→ *Generate a Stamp Template*, page 81

### instructions

This is how you stamp a document with a stamp template:

Step	Action
1	When calling <code>pdfstamp/pdfstamphft</code> , specify the stamp template with the <code>-stp</code> parameter: <pre>pdfstamp -f file -stp template</pre>

### example

The document, `test.pdf`, is stamped with the stamp template, `template.pdf`:  

```
pdfstamp -f test.pdf -stp template.pdf
```

## Position the Stamp Template on the Document

Any PDF file is available as stamp template or a stamp template has been generated with `pdfstamp/pdfstamphft`:

requirement

→ *Generate a Stamp Template*, page 81

This is how you position the stamp template on the document:

instructions

Step	Action
1	When calling <code>pdfstamp/pdfstamphft</code> , specify the horizontal and vertical positions of the stamp template with the <code>-pos</code> parameter: <code>pdfstamp -f file -stp template -pos hv</code>
2	When calling <code>pdfstamp/pdfstamphft</code> , optionally specify the horizontal and vertical distance to the position with the <code>-off</code> parameter: <code>-off xxy unit</code>

The document, `test.pdf`, is stamped with the stamp template, `template.pdf`. The stamp template is positioned at the bottom right with an horizontal distance of 2 cm and a vertical distance of 3 cm:

```
pdfstamp -f test.pdf -stp template.pdf -pos rb -off 2x3 cm
```

 example

## Select Pages From the Stamp Template

### requirement

Any PDF file is available as stamp template or a stamp template has been generated with `pdfstamp/pdfstamphft`:

→ *Generate a Stamp Template*, page 81

### instructions

This is how you specify pages of the stamp template that are to be used as stamps:

Step	Action
1	<p>When calling <code>pdfstamp/pdfstamphft</code>, specify the number of the page to be used as stamp with the <code>-pst</code> parameter:</p> <pre>pdfstamp -f file -stp template -pst page</pre> <p>Alternative:</p> <p>Configure the pages in a page configuration file and specify this with the <code>-i</code> parameter when calling <code>pdfstamp/pdfstamphft</code>:</p> <pre>pdfstamp -f file -stp template -i pagefile</pre>

### page configuration file

For each page to be stamped, the page configuration file contains a `[Page n]` section containing a `PLS_STAMP_PAGE=y` item with `y` is the page from the stamp template.

### example - -pst parameter

The document, `test.pdf`, is stamped with the stamp template, `sealstamp.pdf`. The third page of the stamp template contains the stamp with the logo. The pages of the document are to be stamped with the logo:

```
pdfstamp -f test.pdf -stp sealstamp.pdf -pst 3
```

### example - page configuration file

The four-page document, `m4.pdf`, is stamped with the stamp template, `sealstamp.pdf`. The stamp template contains three stamps for different purposes: cover sheet, trailer sheet and logo. The first page is stamped with the cover sheet stamp, the last one with the trailer sheet stamp and the other pages with the logo. The mapping of the pages is specified in the page configuration file, `page.inp`:

```
[Page 1]
PLS_STAMP_PAGE=1
[Page 2]
PLS_STAMP_PAGE=3
[Page 3]
PLS_STAMP_PAGE=3
[Page 4]
PLS_STAMP_PAGE=2
```

and the following call:

```
pdfstamp -f m4.pdf -stp sealstamp.pdf -i page.inp
```

## Specify the Pages to Be Stamped

Any PDF file is available as stamp template or a stamp template has been generated with `pdfstamp/pdfstamphft`:

requirement

→ *Generate a Stamp Template*, page 81

This is how you specify the pages to be stamped:

instructions

Step	Action
1	<p>When calling <code>pdfstamp/pdfstamphft</code>, specify the pages to be stamped with the <code>-p</code> parameter:</p> <pre>pdfstamp -f file -stp template -p pages</pre> <p>Alternative:</p> <p>Configure the pages in a page configuration file and specify this with the <code>-i</code> parameter when calling <code>pdfstamp/pdfstamphft</code>:</p> <pre>pdfstamp -f file -stp template -i pagefile</pre>

For each page to be stamped, the page configuration file contains a [Page *n*] section containing a `PLS_STAMP_PAGE=y` item with *y* is the page from the stamp template.

page configuration file

The document, `test.pdf`, is stamped with the stamp template, `sealstamp.pdf`. The odd pages are stamped:

```
pdfstamp -f test.pdf -stp sealstamp.pdf -p odd
```

 example -  
-p parameter

The four-page document, `m4.pdf`, is stamped with the stamp template, `sealstamp.pdf`. The stamp template contains three stamps for different purposes: cover sheet, trailer sheet and logo. The first page is stamped with the cover sheet stamp, the last one with the trailer sheet stamp and the other pages with the logo. The mapping of the pages is specified in the page configuration file, `page.inp`:

```
[Page 1]
PLS_STAMP_PAGE=1
[Page 2]
PLS_STAMP_PAGE=3
[Page 3]
PLS_STAMP_PAGE=3
[Page 4]
PLS_STAMP_PAGE=2
```

and the following call:

```
pdfstamp -f m4.pdf -stp sealstamp.pdf -i page.inp
```

 example -  
page configuration file

## Apply the Stamp Template As Watermark

requirement

Any PDF file is available as stamp template or a stamp template has been generated with pdfstamp/pdfstamphft:

→ *Generate a Stamp Template*, page 81

instructions

This is how you apply a stamp template as watermark onto the document:

Step	Action
1	When calling pdfstamp/pdfstamphft, specify with the -usepdfaswatermark parameter that the stamp template is to be stamped as watermark: <code>pdfstamp -f file -stp template -usepdfaswatermark</code>

example

The document, test.pdf, is stamped with the stamp template, template.pdf. The stamps of the stamp template are applied as watermarks onto the document.

```
pdfstamp -f test.pdf -stp template.pdf -usepdfaswatermark
```

## Keep PDF/A in the Output File

Any PDF file is available as stamp template or a stamp template has been generated with `pdfstamp/pdfstampht`:

requirement

→ *Generate a Stamp Template*, page 81

The following requirements must be fulfilled for the keeping of PDF/A:

- The ICC file, `srgb.icc`, must be available in the `%PLSTOOLS%\convcfg` directory.
- The `SEALRESOURCEPATH` environment variable must be set to the `%PLSTOOLS%\convcfg` directory.
- The input file and the stamp template must be conform to PDF/A.

The conformity level of the output file is set to the highest conformity level of the input files this means, for example, that if at least one of the input files is conform to PDF/A-2, the output file will be conform to PDF/A-2, too. The smallest sub level among the input files is taken as sub level of the output file. The comparison order is b, u and a.

conformance level

This is how you keep PDF/A for the output file:

instructions

Step	Action
1	When calling <code>pdfstamp/pdfstampht</code> , specify with the <code>-forcepdfa</code> parameter that the output file is to be conform to PDF/A and an error message is to be output if this is impossible: <pre>pdfstamp -f file -stp template -forcepdfa</pre>

The document, `test.pdf`, is stamped with the stamp template, `template.pdf`. The output file, `stamped.pdf`, is to be conform to PDF/A like the input file:

```
pdfstamp -f test.pdf -stp template.pdf -o stamped.pdf
-forcepdfa
```

 example

## Replace a Text in the Stamp Template

stamp template

When stamping a document with a stamp template, you can replace the texts contained in the stamp template.

 **Caution** - restriction

Please note the following restrictions when replacing texts in a stamp template:

- The text to be replaced can not be found if, for example, the stamp text does not exist as text but as an amount of vectors.
- Some characters in the replacing text may not be displayed unless the font has been embedded in the stamp text completely.
- The border may no longer fit after the replacement due the border will not be adjusted to the new text.

instructions

This is how you replace a text in the stamp template:

Step	Action
1	When calling pdfstamp/pdfstamphft, specify the text to be replaced with the -k parameter and the new text with the -t parameter: <pre>pdfstamp.exe -f file -stp template -k oldtext -t newtext</pre>

 example

The document, test.pdf, is stamped with the stamp template, template.pdf. In the stamp template, the USER text is replaced by John Smith:

```
pdfstamp -f test.pdf -stp template.pdf -k USER -t "John Smith"
```

**Reference**

## 7 Parameter of pdfstamp/pdfstamphft - Reference

The programs have the following mandatory parameters:

mandatory parameter

Mandatory Parameter	Page
-stp <string> Stamp Layout File or Stamp Template	120

The programs have the following optional parameters:

optional parameters

Optional Parameter	Page
-af <binary> Properties of the PDF Annotation	94
-d <string> Delete a Stamp	95
-da <string> Delete an Adobe Stamp	96
-db <string> PDF Configuration File	97
-f <string> Input File	98
-forcepdfa Keep PDF/A in the Output File	99
-fp <string> Flagpage Configuration File	100
-fptxt<n> <string> Flagpage Texts	101
-graystamp <enumeration> Display of the Gray Stamps	102
-h Output the Usage	103
-hed <string> Header with Stamp Texts	104
-i <string> Page Configuration File	105
-k <string> Text to Be Replaced in the Stamp Template	106
-keep Do Not Delete Temporary Stamp Files	107
-ma Generate the Stamp As a PDF Annotation	108
-nopdfa Do No Force PDF/A	109
-o <string> Output File	110
-off <string> Offset of the Stamp Template	111
-p <enumeration> Pages to Be Stamped	112
-pos <string> Position of the Stamp Template	113
-pst <enumeration> Page From the Stamp Template	114
-rec Stamp Embedded Files Recursively	115
-setimagemask Change the White Background to Transparent	116

..... *To be continued*

## Parameter of pdfstamp/pdfstamphft - Reference,

Continuation

.....  
 The programs have the following optional parameters, continuation:

optional parameters, contd.

Optional Parameter	Page
-setuu <float> UserUnit	117
-startpagecount <integer> Start of the Page Numbering	118
-sti <string> Mark a Stamp	119
-t <string> New Text for the Stamp Template	121
-t<n> <string> Stamp Text	122
-totalpagecount <integer> Total Page Number	123
-txt <string> Stamp Text File	124
-usellogicalpage Consider startpagecount	125
-usepdfaswatermark Stamp As Watermark	126
-x <float> Width of the Stamp Template	127
-y <float> Height of the Stamp Template	128

.....

## -af <binary> Properties of the PDF Annotation

purpose

With the -af (annotation flag) parameter, you specify the properties of the PDF annotations when generating stamps as PDF annotations using the -ma parameter.

type

This parameter is optional.

value

With -af, you specify the following value:

Value	Description
<i>flag</i>	<p>Properties of the PDF annotations as array of bits:</p> <p>Starting from the right, the bits have the following meanings:</p> <ul style="list-style-type: none"> <li>Bit 1: Invisible</li> <li>Bit 2: Hidden</li> <li>Bit 3: Print</li> <li>Bit 4: NoZoom</li> <li>Bit 5: NoRotate</li> <li>Bit 6: NoView</li> <li>Bit 7: Readonly</li> <li>Bit 8: Locked</li> <li>Bit 9: ToggleNoView</li> <li>Bit 10: LockedContents</li> </ul> <p> reference - annotation flag:</p> <p>For further information about the single bits in the annotation flag, refer to [PDF_REF].</p>

default

Default is 100, that means the print bit is set, the other bits are not set.

 example

The document, original.pdf, is stamped with the texts contained in default.txt. The stamps are generated as PDF annotations that may be printed but not displayed:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-txt default.txt -ma -af 100100
```

related parameters

There is a close connection to the following parameters:

Related Parameter	Page
-ma Generate the Stamp As a PDF Annotation	108

## -d <string> Delete a Stamp

With the `-d` (delete) parameter, you specify that the stamps with the specified or the default mark, `SEALSTAMP`, are to be deleted. The mark is set with the `-sti` parameter.

purpose

This parameter is optional.

type

With `-d`, you can specify the following value:

value

Value	Description
<i>name</i>	Mark of the stamps to be deleted

If you specify `-d` without value, the stamps with the default mark, `SEALSTAMP`, are deleted.

default

From the document, `original.pdf`, the stamp marked with `stamp1` is deleted:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-d stamp1
```

 examples

From the input file, `original.pdf`, all stamps marked with the default mark, `SEALSTAMP`, are deleted:

```
pdfstamp -f original.pdf -stp default.stp -db default.db -d
```

There is a close connection to the following parameters:

related parameters

Related Parameter	Page
<code>-d &lt;string&gt;</code> Delete a Stamp	95
<code>-sti &lt;string&gt;</code> Mark a Stamp	119

## -da <string> Delete an Adobe Stamp

### purpose

With the `-da` (delete adobe stamp) parameter, you specify that the Adobe stamps with the specified name are to be deleted. Examples of Adobe stamps are header and footer from Adobe LiveCycle.

### type

This parameter is optional.

### value

With `-da`, you can specify the following value:

Value	Description
<i>name</i>	Name of the Adobe stamps to be deleted

### default

If you do not specify `-da` or specify it without value, the Adobe stamps will not be deleted.

### hint - -d

The `-da` and `-d` parameters may be specified both in one call.

### examples

From the document, `original.pdf`, the Adobe stamp Header is deleted:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-da Header
```

### related parameters

There is a close connection to the following parameters:

Related Parameter	Page
<code>-d &lt;string&gt;</code> Delete a Stamp	95

## -db <string> PDF Configuration File

.....  
 With the -db parameter, you specify the text file in which the DPF generation is configured. purpose

.....  
 The parameter is mandatory unless using a stamp template. type

.....  
 With -db, you specify the following value: value

Value	Description
<i>file</i>	Name of the file containing the configuration of the PDF generation

.....  
 There is no default. default

.....  
 → *PDF Configuration File (.db)*, page 149 file syntax

.....  
 The PDF configuration file is a system file that must be modified in very rare case only.  hint - system file

.....  
 The document, *original.pdf*, is stamped according to the stamp layout file, *default.stp*, and with the texts contained in *default.txt*. The PDF generation is configured in the PDF configuration file, *output.db*:  example

```
pdfstamp -f original.pdf -stp default.stp -db output.db
         -txt default.txt
```

## -f <string> Input File

purpose

With the -f parameter, you specify the document to be stamped.

type

The parameter is mandatory when using pdfstamp/pdfstampfmt for stamping a document.

The parameter must not be specified when using pdfstamp/pdfstampfmt for generating a stamp template.

value

With -f, you specify the following value:

Value	Description
<i>file</i>	Name of the input file

default

If you do not specify the -f parameter but the -o parameter, a stamp template is generated.

 example

The document, `original.pdf`, is stamped according to the stamp layout file, `default.stp`, and with the texts contained in `default.txt`.

```
pdfstamp -f original.pdf -stp default.stp -db default.db
        -txt default.txt
```

## -forcepdfa Keep PDF/A in the Output File

With the `-forcepdfa` parameter, you specify that the output file is to be conform to PDF/A.

purpose

The following requirements must be fulfilled for creating PDF/A:

- The ICC file, `srgb.icc`, must be available in the `%PLSTOOLS%\convcfg` directory.
- The `SEALRESOURCEPATH` environment variable must be set to the `%PLSTOOLS%\convcfg` directory.
- All input files, that means the stamp template as well, must be conform to PDF/A.

 **Caution** - requirement

This parameter is optional.

type

By default, the operations that make sense for PDF/A are executed, such as embedding the fonts for the stamp, but the output file does not have to be conform to PDF/A.

default

The document, `original.pdf`, is stamped with the stamp template, `template.pdf`. The stamped file is to be conform to PDF/A:

```
pdfstamp -f original.pdf -stp template.pdf -forcepdfa
```

 example

There is a close connection to the following parameters:

related parameters

Related Parameter	Page
<code>-nopdfa</code> Do No Force PDF/A	109

## -fp <string> Flagpage Configuration File

purpose With the -fp (flagpage) parameter, you specify a text file in which the layout of the flagpage is configured.

type This parameter is optional.

value With -fp, you specify the following value:

Value	Description
<i>file</i>	Name of the text file containing the configuration of the flagpage

default There is no default.

file syntax → *Flagpage Configuration*, page 155

### example

The flagpage with the date and the time is applied onto the document, original.pdf. The layout of the flagpage is configured in flagpage.fp:

```
pdfstamp -f original.pdf -db default.db -fp flagpage.fp
-fptxt1 "2013-09-12" -fptxt2 "15:46"
```

related parameters There is a close connection to the following parameters:

Related Parameter	Page
-fptxt<n> <string> Flagpage Texts	109

## -fptxt<n> <string> Flagpage Texts

With the `-fptxtn` (flagpage text) parameter, you specify the texts for the flagpage. purpose

The parameter is mandatory when specifying the `-fp` parameter. type

With `-fptxtn`, you specify the following value: value

Value	Description
<i>text</i>	Text of the flagpage <i>n</i> with <i>n</i> from 1 to 5

There is no default. default

The flagpage with the date and the time is applied onto the document, `original.pdf`. The layout of the flagpage is configured in `flagpage.fp`:  example

```
pdfstamp -f original.pdf -db default.db -fp flagpage.fp
-fptxt1 "2013-09-12" -fptxt2 "15:46"
```

There is a close connection to the following parameters: related parameters

Related Parameter	Page
<code>-fp &lt;string&gt;</code> Flagpage Configuration File	109

## -graystamp <enumeration> Display of the Gray Stamps

purpose With the -graystamp parameter, you specify how the gray stamps are to be displayed.

gray stamp For a gray stamp, the BO\_CREATION item in the stamp layout file is set to GRAY\_-STAMP.

→ *Stamp Layout File (.stp)*, page 130

type This parameter is optional.

value With -graystamp, you can specify the following values:

Value	Description
color	The gray stamps are displayed transparent colored.
gray	The gray stamps are displayed transparent gray.
simulated	The gray stamps are simulated by Black and White.

default Default is gray, that means that gray stamps are displayed transparent gray.

alternative As an alternative to the specification of the -graystamp parameter, you can set the PDF\_GRAYSTAMP environment variable to the desired value.

### example

The document, original.pdf, is stamped with a transparent color stamp.  
pdfstamp -f original.pdf -stp default.stp -db default.db  
-txt default.txt -graystamp color

## -h Output the Usage

.....  
With the -h parameter, you get the usage.

purpose

.....  
This parameter is optional.

type

.....  
All parameters will be displayed:  
pdfstamp -h

 example

## -hed <string> Header with Stamp Texts

purpose

With the -hed Parameter, you specify a header containing the stamp texts.

type

For a text stamp, the stamp text must be specified using one of the available ways (-hed, -txt, -tn, TX\_TEXT), otherwise the stamp will not be applied.

hint -  
priority

The texts specified with -tn take priority to the texts that are passed in the header with stamp texts and in the stamp text file.

value

With -hed, you specify the following value:

Value	Description
<i>file</i>	Name of the header containing the stamp texts

default

There is no default.

file syntax

The syntax of the header is described in [PLOSSYS\_PARAM\_TEC].

example

The document, *original.pdf*, is stamped. The stamp texts are passed in the *default.hed* header:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-hed default.hed
```

with the *default.hed* header:

```
...
$ PLS_STAMP_0 == "Released"
$ PLS_STAMP_1 == "2013-12-03"
$ PLS_STAMP_2 == "John Smith"
...
```

related parameters

There is a close connection to the following parameters:

Related Parameter	Page
-txt <string> Stamp Text File	124
-t<n> <string> Stamp Text	122

## **-i <string> Page Configuration File**

With the `-i` parameter, you specify a text file with the configuration which pages from the stamp template are to be stamped on which pages of the output file. purpose

This parameter is optional. type

With `-i`, you specify the following value: value

Value	Description
<i>file</i>	Name of the text file containing the page settings

By default, all pages are stamped. default

For each page to be stamped, the page configuration file contains a `[Page n]` section containing a `PLS_STAMP_PAGE=y` item with `y` is the page from the stamp template. file syntax

The four-page document, `original.pdf`, is stamped with different pages from the three-page stamp template, `template.pdf`. The mapping is configured in `layout.ini`:  example

```
pdfstamp -f original.pdf -stp template.pdf -i layout.ini
```

with the page configuration file, `layout.ini`:

```
[Page 1]
PLS_STAMP_PAGE=1
[Page 2]
PLS_STAMP_PAGE=3
[Page 3]
[Page 4]
PLS_STAMP_PAGE=2
```

results in:

- Page 1 of `original.pdf` is stamped with page 1 from `template.pdf`.
- Page 2 of `original.pdf` is stamped with page 3 from `template.pdf`.
- Page 3 of `original.pdf` is not stamped.
- Page 4 of `original.pdf` is stamped with page 2 from `template.pdf`.

## -k <string> Text to Be Replaced in the Stamp Template

purpose With the -k (keyword) parameter, you specify the text to be replaced in the stamp template.

type This parameter is optional.

value With -k, you specify the following value:

Value	Description
<i>key</i>	Text to be replaced in the stamp template by another text; texts with blanks must be quoted with " .

default There is no default.

### example

The document, original.pdf, is stamped with the stamp template, template.pdf. The USER text is replaced by John Smith:

```
pdfstamp -f original.pdf -stp template.pdf
-k USER -t "John Smith"
```

related parameters There is a close connection to the following parameters:

Related Parameter	Page

## -keep Do Not Delete Temporary Stamp Files

.....  
 With the -keep parameter, you specify that the temporary stamp file are not to be deleted. purpose

.....  
 This parameter is optional. type

.....  
 By default, the temporary stamp files are deleted. default

.....  
 The document, original.pdf, is stamped with the stamp template, template.pdf. The temporary stamp files are kept.  example  
`pdfstamp -f original.pdf -stp template.pdf -keep`

## -ma Generate the Stamp As a PDF Annotation

.....

purpose With the `-ma` (make annotation) parameter, you specify that the stamps are generated as PDF annotations.

.....

type This parameter is optional.

.....

default By default, the stamps are generated as graphic elements.

.....

 example The document, `original.pdf`, is stamped with the texts contained in `default.txt`. The stamps are generated as PDF annotations:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
        -txt default.txt -ma
```

.....

related parameters There is a close connection to the following parameters:

Related Parameter	Page
<code>-af &lt;binary&gt;</code> Properties of the PDF Annotation	94

.....

## -nopdfa Do No Force PDF/A

With the `-nopdfa` parameter, you specify that the operations that make sense for PDF/A are not to be executed. Such an operation is, for example, embedding the fonts for the stamps.

purpose

This parameter is optional.

type

By default, the operations that make sense for PDF/A are executed.

default

The document, `original.pdf`, is stamped with the stamp template, `template.pdf`. The operations that make sense for PDF/A will not be executed:

```
pdfstamp -f original.pdf -stp template.pdf -nopdfa
```

 example

There is a close connection to the following parameters:

related parameters

Related Parameter	Page
<code>-forcepdfa</code> Keep PDF/A in the Output File	99

## -o <string> Output File

purpose

With the -o (output) parameter, you specify the output file.

type

The parameter is optional when using pdfstamp/pdfstamphft for stamping a document.

The parameter is mandatory when using pdfstamp/pdfstamphft for generating a stamp template.

value

With -o, you specify the following value:

Value	Description
<i>file</i>	Name of the output file

default

By default, the output file overwrites the input file when stamping a document.

 example - stamp file

The document, original.pdf, is stamped. The stamped output file, stamped.pdf, is generated:

```
pdfstamp -f original.pdf -o stamped.pdf -stp default.stp
        -db default.db -txt default.txt
```

 example - generate stamp template

The stamp template, template.pdf, is generated with the stamp layout file, default.stp, the PDF configuration file, default.db, and the stamp texts in default.txt:

```
pdfstamp -o template.pdf -stp default.stp -db default.db
        -txt default.txt
```

## -off <string> Offset of the Stamp Template

With the `-off` (offset) parameter, you specify the horizontal and vertical distance of the position of the stamp template specified with the `-pos` parameter.

purpose

This parameter is optional.

type

With `-off`, you specify the following value:

value

Value	Description
<code>xy unit</code>	Horizontal and vertical distance of the stamp template to the specified position in direction of the document center.  Available values for <i>x</i> and <i>y</i> : floats  Available values for <i>unit</i> : mm: Millimeter (Default) cm: centimeter m: Meter

Default is `0.0x0.0`, that means that the stamp template have no distance to the specified position.

default

The document, `original.pdf`, is stamped with the stamp template, `template.pdf`. The stamp is positioned at the top right with an horizontal distance of 2 cm and a vertical distance of 1,5 cm:

 example

```
pdfstamp -f original.pdf -stp template.pdf -pos rt
-off 2.0x1.5 cm
```

There is a close connection to the following parameters:

related parameters

Related Parameter	Page
<code>-pos &lt;string&gt;</code> Position of the Stamp Template	113

## -p <enumeration> Pages to Be Stamped

purpose With the -p (pages) parameter, you specify the pages to be stamped.

type This parameter is optional.

values With -p, you can specify the following values:

Value	Description
$\emptyset$	All pages will be stamped.
<i>page</i>	The <i>page</i> page will be stamped.
<i>i, j, k</i>	The pages <i>i</i> , <i>j</i> , and <i>k</i> will be stamped.
<i>i..j</i>	The pages in the range from <i>i</i> to <i>j</i> will be stamped.
even	All even pages will be stamped.
last	Only the last page will be stamped.
odd	All odd pages will be stamped.

default Default is  $\emptyset$ , that means all pages are stamped.

 example

In the document, original.pdf, the third page is stamped:  

```
pdfstamp -f original.pdf -stp default.stp -db default.db
        -txt default.txt -p 3
```

## **-pos <string> Position of the Stamp Template**

With the `-pos` (position) parameter, you specify the position where the stamp template is to be applied onto the document. purpose

This parameter is optional. type

With `-pos`, you specify the following value: value

Value	Description
<i>hv</i>	Position of the stamp template on the document Available values for <i>h</i> : l: left m: middle r: right Available values for <i>v</i> : b: bottom m: middle t: top

Default is `lb`, that means at the bottom left. default

The document, `original.pdf`, is stamped with the stamp template, `template.pdf`. The stamp is displayed in the center:  example

```
pdfstamp -f original.pdf -stp template.pdf -pos mm
```

There is a close connection to the following parameters: related parameters

Related Parameter	Page
<code>-off &lt;string&gt;</code> Offset of the Stamp Template	111

## -pst <enumeration> Page From the Stamp Template

purpose .....  
With the -pst (page stamp template) parameter, you specify which page of a multi-page stamp template are to be used as stamp.

type .....  
This parameter is optional.

values .....  
With -pst, you specify the following value:

Value	Description
<i>page</i>	The <i>page</i> page from the stamp template will be used as stamp.

default .....  
Default is 1, that means that the first page of the stamp template is used.

 example .....  
The document, original.pdf, is stamped with third page of the stamp template, template.pdf.  
`pdfstamp -f original.pdf -stp template.pdf -pst 3`

## -rec Stamp Embedded Files Recursively

.....  
 With the `-rec` (recursive) parameter, you specify that the PDF files embedded in PDF collections are to be stamped recursively.  
 .....

purpose

.....  
 The `-rec` parameter is only available for `pdfstamphft`.  
 .....

 **Caution** -  
pdfstamphft

.....  
 This parameter is optional.  
 .....

type

.....  
 By default, the embedded PDF files are not stamped.  
 .....

default

.....  
 The document, `collection.pdf`, is stamped with the stamp template, `template.pdf`. All embedded PDF files are stamped recursively:  
 .....

 example

```
pdfstamphft -f collection.pdf -stp template.pdf -rec
```

.....

## -setimagemask Change the White Background to Transparent

purpose

With the -setimagemask parameter, you specify that a white background is set transparent. For this, the ImageMask is set to transparent.

 hint - watermark

The -setimagemask parameter is important with watermarks for example due to the actual transparent but white displayed background would cover the watermark.

type

This parameter is optional.

default

By default, the background displayed in white remains white.

 example

The document, original.pdf, is stamped as watermark with the stamp template, template.pdf. The white background is set to transparent:

```
pdfstamp -f original.pdf -stp template.pdf -usepdfaswatermark
-setimagemask
```

## -setuu <float> UserUnit

With the `-setuu` (set user unit) parameter, you specify the UserUnit to be set in the output file.

purpose

Adobe Acrobat Reader can only display PDF files up to a size of 14400 units (200 inch). If a UserUnit is set in the PDF file, all internal metric coordinates are divided by the value of the UserUnit. Because Adobe Acrobat Reader and other viewers evaluate the UserUnit, the correct size is identified further on.

background knowledge

This parameter is optional.

type

With `-setuu`, you specify the following value:

value

Value	Description
<i>userunit</i>	UserUnit; if the value is smaller than 1.0, the UserUnit will be evaluated automatically if required.

By default, the UserUnit will not be set.

default

As an alternative to the specification of the `-setuu` parameter, you can set the `PDF_SET_USER_UNIT` environment variable.

alternative

You can display the UserUnit of a PDF file by calling `pdfprae`:

→ [PDFTOOLS\_TEC]

 hint - output

The document, `original.pdf`, is stamped with the stamp template, `template.pdf`. The UserUnit is set to 2:

```
pdfstamp -f original.pdf -stp template.pdf -setuu 2.0
```

 example

## -startpagecount <integer> Start of the Page Numbering

purpose With the -startpagecount parameter, you specify a number with which the page numbering in the %PAGE% variable is to be started.

type This parameter is optional.

value With -startpagecount, you specify the following value:

Value	Description
<i>page</i>	Page with which the page numbering in %PAGE% starts

default Default is 1, that means that the page numbering starts with 1.

### example

Page numbers are stamped onto to the 34-page document, original.pdf. The page numbering is generated with the t0 stamp text and the %PAGE% and %PAGES% variables. Because this document is to be output as document part, the page numbering is to start at page 17. Then, the page numbering is displayed as "Page 17 of 50", "Page 18 of 50", and so on:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-t0 "Page %PAGE% of %PAGES%" -startpagecount 17
```

related parameters There is a close connection to the following parameters:

Related Parameter	Page
-totalpagecount <integer> Total Page Number	123

## -sti <string> Mark a Stamp

With the `-sti` (sticky) parameter, you specify that the stamps get a mark. By means of this mark, you can delete the stamps with the `-d` parameter later on.

purpose

This parameter is optional.

type

With `-sti`, you specify the following value:

value

Value	Description
<i>name</i>	Text set as mark at the stamp

Unless you specify `-sti`, the stamps will not be marked. When specifying `-sti` without value, the stamps get the default mark, SEALSTAMP.

default

The document, `original.pdf`, is stamped. The stamps get the `stamp1` mark:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-sti stamp1
```

 examples

The document, `original.pdf`, is stamped. The stamps get the default mark, SEALSTAMP:

```
pdfstamp -f original.pdf -stp default.stp -db default.db -sti
```

There is a close connection to the following parameters:

related parameters

Related Parameter	Page
<code>-d &lt;string&gt;</code> Delete a Stamp	95

## -stp <string> Stamp Layout File or Stamp Template

purpose

With the -stp parameter, you specify a text file in which the layout of the stamps is configured or the stamp template.

type

The parameter is mandatory.

value

With -stp, you specify the following value:

Value	Description
<i>file</i>	Name of the text file containing the stamp configuration or name of the stamp template

default

There is no default.

file syntax

→ *Stamp Layout File (.stp)*, page 130

 example

The document, `original.pdf`, is stamped. The layout of the stamps is configured in the stamp layout file, `stamp.stp`:

```
pdfstamp -f original.pdf -stp stamp.stp -db default.db
        -txt default.txt
```

## -t <string> New Text for the Stamp Template

With the -t (text) parameter, you specify the text in the stamp template that is to replace the text specified with the -k parameter. purpose

The parameter is mandatory when specifying the -k parameter. type

With -t, you specify the following value: value

Value	Description
<i>text</i>	Text to be replaced in the stamp template by another text; texts with blanks must be quoted with " .

There is no default. default

The document, `original.pdf`, is stamped with the stamp template, `template.pdf`. The USER text is replaced by John Smith:  example

```
pdfstamp -f original.pdf -stp template.pdf
-k USER -t "John Smith"
```

There is a close connection to the following parameters: related parameters

Related Parameter	Page
-k <string> Text to Be Replaced in the Stamp Template	106

## -t<n> <string> Stamp Text

purpose

With the `-tn` parameters, you specify the stamp texts.

type

For a text stamp, the stamp text must be specified using one of the available ways (`-hed`, `-txt`, `-tn`, `TX_TEXT`), otherwise the stamp will not be applied.

 hint - priority

The texts specified with `-tn` take priority to the texts that are passed in the header with stamp texts and in the stamp text file.

value

With `-tn` you specify the following value:

Value	Description
<code>text</code>	Text of the stamp <i>n</i> with <i>n</i> from 0 to 99

default

There is no default.

 example

The document, `original.pdf`, is stamped. The stamp texts are passed with the `-t0`, `-t9` and `-t10` parameters:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-t0 "Released" -t9 "25.5.2013" -t10 "John Smith"
```

related parameters

There is a close connection to the following parameters:

<code>-txt &lt;string&gt;</code> Stamp Text File	124

## -totalpagecount <integer> Total Page Number

With the `-totalpagecount` parameter, you specify the total page number. The `%PAGES%` variable will be set to this value.

purpose

This parameter is optional.

type

With `-totalpagecount`, you specify the following value:

value

Value	Description
<code>totalpage</code>	Total page number of the document ( <code>%PAGES%</code> )

Default is the actual page number of the document.

default

Page numbers are stamped onto to the document, `original.pdf`. The page numbering is generated with the `t0` stamp text and the `%PAGE%` and `%PAGES%` variables. Because this document is to be output as document part, the page numbering is to start at page 17 and 100 is to be displayed as total page number. Then, the page numbering is displayed as "Page 17 of 100", "Page 18 of 100", and so on:

 example

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-t0 "Page %PAGE% of %PAGES%" -startpagecount 17
-totalpagecount 100
```

There is a close connection to the following parameters:

related parameters

Related Parameter	Page
<code>-startpagecount &lt;integer&gt;</code> Start of the Page Numbering	118

## -txt <string> Stamp Text File

purpose With the -txt parameter, you specify a text file containing the stamp texts.

type For a text stamp, the stamp text must be specified using one of the available ways (-hed, -txt, -tn, TX\_TEXT), otherwise the stamp will not be applied.

hint - priority

The texts specified with -tn take priority to the texts that are passed in the header with stamp texts and in the stamp text file.

value With -txt, you specify the following value:

Value	Description
<i>file</i>	Name of the text file containing the stamp texts

default There is no default.

file syntax The stamp text file contains a line with the stamp text for each stamp.

example

The document, original.pdf, is stamped. The stamp texts are passed in the stamp text file, stamps.txt:

```
pdfstamp -f original.pdf -stp default.stp -db default.db
-txt stamps.txt
```

with stamps.txt:

```
Released
2013-12-03
John Smith
```

related parameters There is a close connection to the following parameters:

Related Parameter	Page
-hed <string> Header with Stamp Texts	104
-t<n> <string> Stamp Text	122

## -usellogicalpage Consider startpagecount

With the `-usellogicalpage` parameter, you specify that the starting page number specified with the `-startpagecount` parameter is taken into account when evaluating the pages to be stamped (`BO_PAGES_TO_STAMP`).

This parameter is optional.

type

With the `BO_PAGES_TO_STAMP` item in the stamp box configuration, you can specify the pages to be stamped.

pages to be stamped

→ *Stamp Layout File (.stp)*, page 130

By default, the actual page numbers of the document are taken when evaluating the pages to be stamped.

default

The document, `original.pdf`, is stamped. The page numbering starts with 4. This is taken into account, when evaluating the pages to be stamped:

 examples

```
pdfstamp -f original.pdf -stp default.stp -db default.db
        -txt default.txt -startpagecount 4
```

with `default.stp`:

```
...
BO_PAGES_TO_STAMP = 5
...
```

with `-usellogicalpage` results in:

- The second page of `original.pdf` will be stamped.

without `-usellogicalpage` (default) results in:

- The fifth page of `original.pdf` will be stamped.

There is a close connection to the following parameters:

related parameters

## -usepdfaswatermark Stamp As Watermark

.....  
purpose With the -usepdfaswatermark parameter, you specify that the stamp template is to be stamped as watermark.  
.....

.....  
type This parameter is optional.  
.....

.....  
default By default, the stamp template is applied as stamp.  
.....

.....  
alternative As an alternative to the specification of the -usepdfaswatermark parameter, you can set the PDF\_USE\_PDF\_AS\_WATERMARK environment variable.  
.....

 example The document, original.pdf, is stamped as watermark with the stamp template, template.pdf:  

```
pdfstamp -f original.pdf -stp template.pdf -usepdfaswatermark
```

  
.....

related parameters There is a close connection to the following parameters:

Related Parameter	Page
-stp <string> Stamp Layout File or Stamp Template	120

## -x <float> Width of the Stamp Template

With the `-x` parameter, you specify how wide the stamp template is to be generated.

purpose

This parameter is optional.

type

With `-x`, you specify the following value:

value

Value	Description
<i>width</i>	Width of the stamp template in meter

Default is DIN A4, that means 0.21.

default

The stamp template, `template.pdf`, will be generated. The width of the stamp template is 4 cm and its height is 6 cm:

 example

```
pdfstamp -o template.pdf -stp default.stp -db default.db
-txt default.txt -x 0.04 -y 0.06
```

There is a close connection to the following parameters:

related parameters

Related Parameter	Page
<code>-y &lt;float&gt;</code> Height of the Stamp Template	128

## -y <float> Height of the Stamp Template

purpose

With the -y parameter, you specify how high the stamp template is to be generated.

type

This parameter is optional.

value

With -y, you specify the following value:

Value	Description
<i>height</i>	Height of the stamp template in meter

default

Default is DIN A4, that means 0.297.

 example

The stamp template, `template.pdf`, will be generated. The width of the stamp template is 4 cm and its height is 6 cm:

```
pdfstamp -o template.pdf -stp default.stp -db default.db
-txt default.txt -x 0.04 -y 0.06
```

# 8 Configuration - Reference

.....  
This chapter describes the following configuration files and settings:

in this chapter

Configuration File	Page
Stamp Layout File (.stp)	130
PDF Configuration File (.db)	149
Flagpage Configuration	155

.....

## 8.1 Stamp Layout File (.stp)

purpose In the stamp layout file, you configure the layout, the size and the color of the stamp texts and boxes.

PLOSSYS netdome With PLOSSYS netdome, the stamp layout file is configured at the output queue or is passed together with the job files. As basis, you can use the generic stamp layout file, %PLSPLT%\generic.stp.

pdfstamp/  
pdfstamphft With pdfstamp/pdfstamphft, a stamp layout file must be specified unless a stamp template is used for stamping.

parameter When calling pdfstamp/pdfstamphft, specify the stamp layout file with the -stp parameter.

→ *-stp <string> Stamp Layout File or Stamp Template, page 120*

 hint - template and examples

A template for the stamp layout file is contained in delivery of pdfstamp/pdfstamphft: %PLSTOOLS%\convcfg\pdfstamp\default.cfg. Many examples of the stamp configuration are found in %PLSTOOLS%\convcfg\pdfstamp\muster.stp.

sections The stamp layout file contains the following items in the following sections:

Section	Page
Items Without Section	131
[STAMP_DEFINITION] Section	132
[text] Section	133
[box] Section	137
[SIZE_DEFINITIONS] Section	145

 example

→ *Example of the Stamp Layout File, page 147*

## Items Without Section

.....  
The items without section in the stamp layout file concern the format-specific stamping. purpose

.....  
The [STAMP\_DEFINITION] section contains the following items: items

Item	Description
TOLERANCE <i>tolerance</i>	<p>Tolerance when the FitExact method is being used for evaluating the paper size for the format-specific stamping</p> <p>Available values for <i>tolerance</i>: tolerance in meters</p> <p>Default: none</p> <p> <b>Caution</b> - PLOSSYS netdome: TOLERANCE is only evaluated by pdfstamp/pdfstamp-phft due to PLOSSYS netdome does not support the format-specific stamping.</p>
FIT_EXACT <i>boolean</i>	<p>Method used for evaluating the paper size for the format-specific stamping</p> <p>Available values for <i>boolean</i>: NO: The FirstFit method is used. YES: The FitExact method is used.</p> <p>Default: NO</p> <p> <b>Caution</b> - PLOSSYS netdome: TOLERANCE is only evaluated by pdfstamp/pdfstamp-phft due to PLOSSYS netdome does not support the format-specific stamping.</p>

.....

## [STAMP\_DEFINITION] Section

purpose

In the [STAMP\_DEFINITION] section, you configure the sections for the stamp texts and boxes and the general settings for all stamps.

items

The [STAMP\_DEFINITION] section contains the following items:

Item	Description
BOX_DEFINITIONS <i>box0 box1 ...</i>	Sections for the stamp boxes  Available values for <i>boxn</i> : maximum 100 strings containing maximum 20 characters  Default: none
COLOR_DEFINITION_ <i>n</i> <i>red green blue</i>	RGB value of the color <i>n</i>  Available values for <i>n</i> : <i>n</i> can be between 0 and 255 and is specified in the stamp texts in TX_COLOR and in stamp boxes in BO_COLOR.  Available values for <i>red green blue</i> : three floats between 0.0 and 1.0 for the red, green and blue components of the color  Default: none
SCALE_STAMP <i>boolean</i>	Are the stamped to be scaled with the document? SCALE_STAMP is used as default for BO_SCALE_BOX.  Available values for <i>boolean</i> : NO: The stamps will not be scaled. YES: The stamps will be scaled.  Default: NO   <b>Caution</b> - pdfstamp/pdfstamphft: SCALE_STAMP is only evaluated by PLOSSYS netdome due to pdfstamp/pdfstamphft does not scale.
TEXT_DEFINITIONS <i>text0 text1 ...</i>	Sections for the stamp texts  Available values for <i>textn</i> : maximum 100 strings containing maximum 20 characters  Default: none

## [text] Section

.....  
 In the [text] section, you configure the properties of the stamp texts with the purpose name *text*.  
 .....

The [text] section contains the following items: items

Item	Description
TX_ALIGNMENT_HOR <i>align</i>	Horizontal alignment of the stamp text  Available values for <i>align</i> : CENTER: centered LEFT: left-aligned RIGHT: right-aligned  Default: LEFT
TX_ALIGNMENT_VER <i>align</i>	Vertical alignment of the stamp text  Available values for <i>align</i> : BASE: base line BOTTOM: bottom line CAP: cap line CENTER: center line TOP: cap height  Default: BASE
TX_COLOR <i>color</i>	Color of the stamp text  Available values for <i>color</i> : integer between 0 and 255; the colors are configured in COLOR_DEFINITION_n: → [STAMP_DEFINITION] Section, page 132  Default: 1, that means Black
TX_EXPANSION <i>width</i>	Character width of the stamp text  Available values for <i>width</i> : float as factor of the character width specified in the font  Default: 1.0

..... To be continued

## [text] Section, Continuation

items, contd.

The [text] section contains the following items, continuation:

Item	Description
TX_FONT <i>font</i>	Font of the stamp text  Available values for <i>font</i> : GKS font number  Default: -2   reference - GKS fonts:  The GKS fonts and their numbers are described in [FONTS_USR].
TX_LINEBREAK <i>boolean</i>	Are line breaks allowed in the stamp text? The line breaks in the stamp text are entered as \n or \r.  Available values for <i>boolean</i> : N: The text is not wrapped. Y: With \n and \r , the line is broken.  Default: N   <b>Caution</b> - PLOSSYS netdome:  TX_LINEBREAK is not supported by PLOSSYS netdome.
TX_LINEDISTANCE <i>distance</i>	Line spacing with multi-line stamp texts  Available values for <i>distance</i> : float; the unit is meter.  Default: 0.0   <b>Caution</b> - PLOSSYS netdome:  TX_LINEDISTANCE is not supported by PLOSSYS netdome.

..... To be continued

## [text] Section, Continuation

The [text] section contains the following items, continuation:

items, contd.

Item	Description
TX_LWSC <i>width</i>	<p>Line width of the stamp text</p> <p>Available values for <i>width</i>: float; the unit is meter.</p> <p>Default: 0.000254</p> <p> hint - scaling: The line width will be scaled together with the stamp.</p> <p> <b>Caution</b> - render mode FILL: TX_LWSC does not have an effect for a font with the render mode FILL due to only the filling of a character will be displayed. → <i>Items of the PDF Configuration File, page 150</i></p>
TX_OFFSETX <i>offset</i>	<p>Horizontal distance from the text beginning to the reference point of the stamp box</p> <p>Available values for <i>offset</i>: float; the unit is meter.</p> <p>Default: 0.0</p>
TX_OFFSETY <i>offset</i>	<p>Vertical distance from the text beginning to the reference point of the stamp box</p> <p>Available values for <i>offset</i>: float; the unit is meter.</p> <p>Default: 0.0</p>
TX_PATH <i>direction</i>	<p>Writing direction of the stamp text</p> <p>Available values for <i>direction</i>: DOWN: top down LEFT: from the right to the left RIGHT: from the left to the right UP: bottom up</p> <p>Default: RIGHT</p>

..... *To be continued*

**[text] Section**, Continuation

items, contd.

The [text] section contains the following items, continuation:

Item	Description
TX_SIZE <i>size</i>	Text size of the stamp text  Available values for <i>size</i> : float; the unit is meter.  Default: 0.005
TX_SPACING <i>spacing</i>	Space between the characters that is to be inserted in addition to the default space of the font  Available values for <i>spacing</i> : float; 1.0 means that the additional spacing corresponds to the height of a capital letter.  Default: 0.0
TX_TEXT <i>text</i>	Default stamp text unless it is specified explicitly  Available values for <i>text</i> : string containing maximum 256 characters  Default: none

## [box] Section

In the [box] section, you configure the properties of the stamp box with the name *box*. purpose

The name *box* of the stamp box must be specified in the BOX\_DEFINITIONS item in the [STAMP\_DEFINITION] section. BOX\_ DEFINITIONS

→ [STAMP\_DEFINITION] Section, page 132

The [box] section contains the following items: items

Item	Description
BO_ADAPT_TEXT_TO_FRAME <i>boolean</i>	<p>Is the text stamp to be scaled in such a way that it fits into the stamp box specified with BO_HEIGHT and BO_WIDTH exactly.</p> <p>Available values for <i>boolean</i>:</p> <p>NO: The text stamp will not be scaled. YES: The text stamp will be scaled according to the stamp box.</p> <p>Default: NO</p> <p> <b>Caution</b> - PLOSSYS netdome:</p> <p>BO_ADAPT_TEXT_TO_FRAME is not supported by PLOSSYS netdome.</p>
BO_ALIGNMENT_HOR <i>align</i>	<p>Horizontal alignment of the stamp box</p> <p>Available values for <i>align</i>:</p> <p>CENTER: centered LEFT: left-aligned RIGHT: right-aligned</p> <p>Default: LEFT</p>
BO_ALIGNMENT_VER <i>align</i>	<p>Vertical alignment of the stamp box</p> <p>Available values for <i>align</i>:</p> <p>BOTTOM: at the bottom CENTER: centered TOP: at the top</p> <p>Default: TOP</p>

..... To be continued

**[box] Section**, Continuation

items, contd.

The [box] section contains the following items, continuation:

Item	Description
BO_ANGLE <i>angle</i>	<p>Angle by which the stamp box is rotated; the reference point for the rotation is the reference point of the stamp which is used for aligning the stamp text.</p> <p>Available values for <i>angle</i>: floats; positive values result in a counter-clockwise rotation.</p> <p>Default: 0</p>
BO_BACKGROUND <i>background</i>	<p>Background of the stamp box</p> <p>Available values for <i>background</i>:            BLANKED: The graphic elements of the stamp have a white border within which the document is covered completely. In the other part of the stamp, the document shows through.            OPAQUE: The complete stamp including its border covers the document.            TRANSPARENT: The document shows through the stamp background. The stamp foreground, that means the stamp text for example, does not show through.</p> <p>Default: TRANSPARENT</p>
BO_BORDER <i>boolean</i>	<p>Is a frame to be displayed around the stamp box?</p> <p>Available values for <i>boolean</i>:            NO: No frame will be displayed.            YES: A frame will be displayed.</p> <p>Default: YES</p>
BO_COLOR <i>color</i>	<p>Color of the frame around the stamp box</p> <p>Available values for <i>color</i>:            integer between 0 and 255; the colors are configured in COLOR_DEFINITION_n:            → [STAMP_DEFINITION] Section, page 132</p> <p>Default: 1, that means Black</p>

..... To be continued

## [box] Section, Continuation

The [box] section contains the following items, continuation:

items, contd.

Item	Description
BO_CONTENTS <i>text0 text1 ...</i>	<p>Sections of the stamp texts belonging to the stamp box</p> <p>Available values for <i>textn</i>: maximum 100 strings containing maximum 20 characters</p> <p>Default: none</p>
BO_CREATION <i>method</i>	<p>Method how the stamp is applied onto the document</p> <p>Available values for <i>method</i>:</p> <p>GRAY_STAMP: The stamp will be output in Gray onto the document. The brightness of the gray stamp is set by the specified brightness of the text color (see TX_COLOR).</p> <p>STAMP: The stamp will be applied onto the document.</p> <p>WATERMARK: The stamp will be applied as watermark behind the document. Watermarks have the same color as stamps. They only differ in their time of creation.</p> <p>Default: STAMP</p> <p> hint - gray stamp:</p> <p>The layout of the gray stamp will be specified further with the <code>-graystamp</code> parameter when calling <code>pdfstamp/pdfstamphft</code> and by the environment variable <code>PDF_GRAYSTAMP</code>.</p>
BO_DISTANCEX <i>distance</i>	<p>Horizontal distance to the position configured by BO_ALIGNMENT_HOR, BO_ALIGNMENT_VER and BO_ROTATE</p> <p>Available values for <i>distance</i>: float; the unit is meter.</p> <p>Default: 0.0</p>

..... To be continued

**[box] Section**, Continuation

items, contd.

The [box] section contains the following items, continuation:

Item	Description
BO_DISTANCEY <i>distance</i>	Vertical distance to the position configured by BO_ALIGNMENT_HOR, BO_ALIGNMENT_VER and BO_ROTATE  Available values for <i>distance</i> : float; the unit is meter.  Default: 0.0
BO_FRAME <i>file</i>	Name of the graphic file that is applied onto the document as graphic stamp  Available values for <i>file</i> : file name; the graphic file must be available in the directory of the stamp layout file *: The graphic file will be passed together with the output job files (PLOSSYS netdome only). → <i>Pass a Graphic File With a Job</i> , page 59  Default: none
BO_HEIGHT <i>height</i>	height of the stamp  Available values for <i>height</i> : float; the unit is meter.  Default: 0.03
BO_LWSC <i>width</i>	Line width of the frame around the stamp box  Available values for <i>width</i> : float; the unit is meter.  Default: 0.000254
BO_MAXIMIZE <i>boolean</i>	Is the stamp box to be enlarged so that the stamp reaches the document border at one side at least?  Available values for <i>boolean</i> : NO: The stamp box will not be enlarged. YES: The stamp box will be enlarged.  Default: NO

..... To be continued

## [box] Section, Continuation

The [box] section contains the following items, continuation:

items, contd.

Item	Description
BO_OFFSETX <i>offset</i>	Horizontal distance of the frame to the stamp box  Available values for <i>offset</i> : float; the unit is meter.  Default: 0.0
BO_OFFSETY <i>offset</i>	Vertical distance of the frame to the stamp box  Available values for <i>offset</i> : float; the unit is meter.  Default: 0.0
BO_ON_SCALEFACTOR <i>min max</i>	Scaling factor of the stamp box; the stamp box will only be displayed if the scaling factor of the document is within the specified range.  Available values for <i>min</i> and <i>max</i> : float; the unit is meter.  Default: 0.0 1.0   <b>Caution</b> - pdfstamp/pdfstamphft:  When stamping with pdfstamp/pdfstamphft, you have to specified an range that includes 1.0 due to pdfstamp/pdfstamphft does not scale.
BO_ORIGIN <i>origin</i>	reference point of the stamp box  Available values for <i>origin</i> : VISIBLE_AREA: The reference point of the stamp box will be moved to the printable area that means the stamp always appears at the same position of the paper.  Default: BO_ORIGIN is deactivated that means that the reference point of the stamp box corresponds to the document borders and the stamp always appears at the same position of the document.

..... To be continued

## [box] Section, Continuation

items, contd.

The [box] section contains the following items, continuation:

Item	Description
BO_PAGES_DOMAIN <i>domain</i>	Relation of the pages to be stamped  Available values for <i>domain</i> : PLOT: The page number relates to the document. SET: The page number relates to the set collation.  Default: PLOT   <b>Caution</b> - pdfstamp/pdfstamphft: BO_PAGES_DOMAIN is only evaluated by PLOSSYS netdome due to pdfstamp/pdfstamphft does not support set collations.
BO_PAGES_TO_STAMP <i>page</i>	pages to be stamped  Available values for <i>page</i> : 0: All pages are stamped. EVEN: The even pages are stamped. FIRST: The first page is stamped. LAST: The last page is stamped. ODD: The odd pages are stamped. xMODy: Each page y starting as of the page x is stamped. x..LAST: All pages as of the page x are stamped. FIRST..x: All pages up to the page x are stamped. x..y: All pages from the page x to the page y are stamped.  Default: 0   <b>hint</b> - multiple items: Multiple items are separated by comma, for example: BO_PAGES_TO_STAMP „2,3“ BO_PAGES_TO_STAMP „6,8, LAST“ BO_PAGES_TO_STAMP „FIRST,2, LAST“

..... To be continued

## [box] Section, Continuation

The [box] section contains the following items, continuation:

items, contd.

Item	Description
BO_REP_X <i>min max</i>	<p>Repetition vector in horizontal direction</p> <p>Available values for <i>min</i> and <i>max</i>: float; the unit is meter.</p> <p>Default: 0.0 0.0</p>
BO_REP_Y <i>min max</i>	<p>Repetition vector in vertical direction</p> <p>Available values for <i>min</i> and <i>max</i>: float; the unit is meter.</p> <p>Default: 0.0 0.0</p>
BO_ROTATE <i>rot</i>	<p>Is the stamp box to be rotated with the document?</p> <p>Available values for <i>rot</i>: NOT_ROTATE: The stamp box will not be rotated. ROTATE: The stamp box will be rotated.</p> <p>Default: ROTATE</p> <p> <b>Caution</b> - pdfstamp/pdfstamphft: BO_ROTATE is not supported by pdfstamp/pdfstamphft.</p>
BO_SCALE_BOX <i>boolean</i>	<p>Is the stamp box to be scaled with the document?</p> <p>Available values for <i>boolean</i>: NO: The stamp box will not be scaled. YES: The stamp box will be scaled.</p> <p>Default: Setting of SCALE_STAMP</p> <p>→ [STAMP_DEFINITION] Section, page 132</p> <p> <b>Caution</b> - pdfstamp/pdfstamphft: BO_SCALE_BOX is not supported by pdfstamp/pdfstamphft.</p>
BO_TXT_WIDTH_MIN <i>width</i>	<p>Minimum width of the stamp box</p> <p>Available values for <i>width</i>: float; the unit is meter.</p> <p>Default: The stamp box has the same width as the text contained in it.</p>

..... To be continued

## [box] Section, Continuation

---

items, contd.

The [box] section contains the following items, continuation:

Item	Description
BO_WIDTH <i>width</i>	width of the stamp  Available values for <i>width</i> : float; the unit is meter.  Default: The graphic or the text is displayed in the original size. 72 dpi is used as default resolution for a graphic.

---

## [SIZE\_DEFINITIONS] Section

In the optional [SIZE\_DEFINITIONS] section, you configure the formats valid for the format-specific stamp configurations.

purpose

The [SIZE\_DEFINITIONS] section is not supported by PLOSSYS netdome, that means format-specific stamping is only available with pdfstamp/pdfstampft.

 **Caution** - not PLOSSYS net-dome

The [SIZE\_DEFINITIONS] section contains the following items:

items

Item	Description
<i>format width height</i>	<p>Format with width and height</p> <p>Available values for <i>format</i>: any string; is used as prefix for the format-specific sections.</p> <p>Available values for <i>width</i> and <i>height</i>: float; the unit is meter.</p> <p>Default: none</p> <p>If the paper size of a document corresponds to one of the formats using the specified comparison method (FIT_EXACT) and the specified tolerance (TOLERANCE), the stamp settings are taken from the format-specific section:  <code>[format\STAMP_DEFINITION]</code>  <code>[format\text]</code>  <code>[format\box]</code></p> <p>Otherwise, the defaults from the sections without <i>format</i> are used.</p>

..... *To be continued*

## [SIZE\_DEFINITIONS] Section, Continuation

.....

## 8.2 PDF Configuration File (.db)

.....  
In the PDF configuration file, you configure the settings for the PDF generation.

purpose

.....  
With PLOSSYS netdome, the PDF configuration file is configured at the output queue.

PLOSSYS net-  
dome

.....  
With pdfstamp/pdfstamphft, the PDF configuration file must be specified.

pdfstamp/  
pdfstamphft

.....  
The PDF configuration file is specified with the `-db` parameter when calling pdfstamp/pdfstamphft.

parameter

→ `-db <string>` *PDF Configuration File*, page 97

.....  
→ *Items of the PDF Configuration File*, page 150

items

.....  
→ *Example of the PDF Configuration File*, page 154

## Items of the PDF Configuration File

items

The PDF configuration file contains the following items:

Item	Description
PDF.Author: <i>author</i>	<p>Entry for the document property Author in the PDF file</p> <p>Available values for <i>author</i>: any string</p> <p>Default: none</p>
PDF.colour: <i>n red green blue name</i>	<p>Color definition</p> <p>Available values for <i>n</i>: <i>n</i> can be between 0 and 16 and is specified in the stamp texts in TX_COLOR and in stamp boxes in BO_COLOR.</p> <p>Available values for <i>red green blue</i>: three floats between 0.0 and 1.0 for the red, green and blue components of the color</p> <p>Available values for <i>name</i>: any string as color name</p> <p>Default: Color table from default.db</p>
PDF.color_available: <i>boolean</i>	<p>How are the colors to be displayed in the PDF file?</p> <p>Available values for <i>boolean</i>: NO: The colors are displayed as grayscale. YES: The colors are displayed as colors.</p> <p>Default: YES</p>
PDF.compression: <i>boolean</i>	<p>Is the FlatDecode compression method to be used?</p> <p>Available values for <i>boolean</i>: NO: The file will not be compressed. YES: The file will be compressed using Flat-Decode.</p> <p>Default: NO</p>

..... To be continued

## Items of the PDF Configuration File, Continuation

The PDF configuration file contains the following items, continuation:

items, contd.

Item	Description
PDF.Creator: <i>creator</i>	Entry for the document property Creator in the PDF file  Available values for <i>creator</i> : any string  Default: none
PDF.font: <i>nr name render object</i>	Font definition  Available values for <i>nr</i> : integer; will be specified in TX_FONT for the stamp texts.  Available values for <i>name</i> : any string for the font name  Available values for <i>render</i> : FILL: The filling of the characters is displayed. FILLSTROKE: The filling and the line of the characters are displayed. INVISIBLE: The characters are invisible. STROKE: The line of the characters is displayed.  Available values for <i>object</i> : Name of the font file  Default: none   hint - directory:  The fonts must be available in the SEAL-FONTS\pdo directory.

..... To be continued

## Items of the PDF Configuration File, Continuation

items, contd.

The PDF configuration file contains the following items, continuation:

Item	Description
PDF.gray_available: <i>boolean</i>	<p>How are the grayscales to be displayed in the PDF file</p> <p>Available values for <i>boolean</i>:</p> <p>NO: The grayscales are displayed in Black and White.</p> <p>YES: The grayscales are displayed as grayscales.</p> <p>Default: YES</p> <p> hint - PDF.color_available:</p> <p>PDF.color_available takes priority that means PDF.gray_available will only be evaluated if PDF.color_available: NO has been specified.</p>
PDF.Keywords: <i>keywords</i>	<p>Entry for the document property Keywords in the PDF file</p> <p>Available values for <i>keywords</i>:</p> <p>any string</p> <p>Default: none</p>
PDF.precision: <i>prec</i>	<p>Number of decimal places used in coordinates</p> <p>Available values for <i>prec</i>:</p> <p>integer</p> <p>Default: 0</p>
PDF.Producer: <i>producer</i>	<p>Entry for the document property Producer in the PDF file</p> <p>Available values for <i>producer</i>:</p> <p>any string</p> <p>Default: none</p>
PDF.resolution: <i>res</i>	<p>Resolution of the internal coordinates</p> <p>Available values for <i>res</i>:</p> <p>integer</p> <p>Default: 600</p>

..... To be continued

## Items of the PDF Configuration File, Continuation

The PDF configuration file contains the following items, continuation:

items, contd.

Item	Description
PDF.Subject: <i>subject</i>	Entry for the document property Subject in the PDF file  Available values for <i>subject</i> : any string  Default: none
PDF.Title: <i>title</i>	Entry for the document property Title in the PDF file  Available values for <i>title</i> : any string  Default: none
PDF.type: <i>version</i>	Is the PDF file to be generated conform to PDF/A?  Available values for <i>version</i> : PDF/A: The file will be generated conform to PDF/A 1b. PDF: The file will be generated as "normal" PDF file.  Default: PDF
PDF.Version: <i>version</i>	The PDF file is to be generated in which PDF version?  Available values for <i>version</i> : 1.n: The file will be generated in PDF 1.n.  Default: 1.4

### 8.3 Flagpage Configuration

.....  
With the flagpage configuration settings, you configure the position and the layout of the flagpage.

purpose

.....  
With PLOSSYS netdome, you specify the settings for the flagpage in the plossys.cfg configuration file.

PLOSSYS net-  
dome

.....  
With pdfstamp/pdfstampht, you specify the settings for the flagpage in a flagpage configuration file.

pdfstamp/  
pdfstampht

.....  
The flagpage configuration file is specified with the -fp parameter when calling pdfstamp/pdfstampht.

parameter

→ -fp <string> *Flagpage Configuration File*, page 100

.....  
→ *Flagpage Configuration Settings*, page 156

items

.....  
→ *Example of the Flagpage Configuration Settings*, page 160

 example

## Flagpage Configuration Settings

settings

The following flagpage configuration settings are available:

Item	Description
FP_ALIGNMENT <i>align</i>	Horizontal alignment of the flagpage; in addition to FP_SIDE, the flagpage can be positioned at every document corner this way.  Available values for <i>align</i> : CENTER: centered LEFT: left-aligned RIGHT: right-aligned  Default: CENTER
FP_CLEARBG <i>boolean</i>	Is the background of the flagpage to be cleared?  Available values for <i>boolean</i> : NO: The background will not be cleared. YES: The background will be cleared.  Default: NO
FP_COLOR <i>color</i>	Color of the flagpage text  Available values for <i>color</i> : integer between 0 and 255; the colors are configured in COLOR_DEFINITION_n in the stamp layout file: → [STAMP_DEFINITION] Section, page 132  Default: 1, that means Black
FP_DISTANCEX <i>distance</i>	Horizontal distance to the document border  Available values for <i>distance</i> : float; the unit is meter.  Default: 0.0
FP_DISTANCEY <i>distance</i>	Vertical distance to the document border  Available values for <i>distance</i> : float; the unit is meter.  Default: 0.0

..... To be continued

## Flagpage Configuration Settings, Continuation

The following flagpage configuration settings are available, contd.:

settings, continu-  
ation

Item	Description
FP_FONT <i>font</i>	<p>Font of the flagpage text</p> <p>Available values for <i>font</i>: GKS font number</p> <p>Default: -2</p> <p> reference - GKS fonts:</p> <p>The GKS fonts and their numbers are described in [FONTS_USR].</p>
FP_GENERATE <i>generate</i>	<p>When is the flagpage to be created?</p> <p>Available values for <i>generate</i>:</p> <p>ALLOWED: The flagpage will be generated dependent on the header item.</p> <p>EVER: The flagpage will always be generated independent of the header item.</p> <p>NEVER: The flagpage will never be generated independent of the header item.</p> <p>Default: ALLOWED</p> <p> <b>Caution</b> - pdfstamp/pdfstamphft:</p> <p>FP_GENERATE is not supported by pdfstamp/pdfstamphft.</p>
FP_LINEWIDTH <i>width</i>	<p>Line width of the stamp text</p> <p>Available values for <i>width</i>: float; the unit is meter.</p> <p>Default: 0.0003</p>
FP_POSITION <i>position</i>	<p>Position of the flagpage referring to the document border</p> <p>Available values for <i>position</i>:</p> <p>INSIDE: The flagpage will be applied inside the document border.</p> <p>OPTIONAL_OUTSIDE: The flagpage will be applied outside the document if this is possible without scaling the document, otherwise, it will be applied inside.</p> <p>OUTSIDE: The flagpage will be applied outside the document border. If required, the document is scaled or clipped dependent on the scaling type.</p> <p>Default: OUTSIDE</p>

..... To be continued

## Flagpage Configuration Settings, Continuation

settings, continuation

The following flagpage configuration settings are available, contd.:

Item	Description
FP_ROTATE <i>rot</i>	<p>Is the flagpage to be rotated with the document?</p> <p>Available values for <i>rot</i>:</p> <p>NOT_ROTATE: The flagpage will not be rotated. ROTATE: The flagpage will be rotated.</p> <p>Default: ROTATE</p> <p> <b>Caution</b> - pdfstamp/pdfstampft: FP_ROTATE is not supported by pdfstamp/pdfstampft.</p>
FP_SIDE <i>side</i>	<p>Document border where the flagpage is output; in addition to FP_ALIGNMENT, the flagpage can be positioned at every document corner this way.</p> <p>Available values for <i>side</i>:</p> <p>BOTTOM: document border at the bottom LEFT: document border at the left RIGHT: document border at the right TOP: document border at the top</p> <p>Default: BOTTOM</p>
FP_SPACING <i>spacing</i>	<p>Character spacing of the flagpage text</p> <p>Available values for <i>spacing</i>:</p> <p>float; 1.0 means that the additional spacing corresponds to the height of a capital letter.</p> <p>Default: 0.0</p>
FP_TEXTSIZE <i>size</i>	<p>Text size of the flagpage</p> <p>Available values for <i>size</i>:</p> <p>float; the unit is meter.</p> <p>Default: 0.003</p>

..... To be continued

## Flagpage Configuration Settings, Continuation

.....  
The following flagpage configuration settings are available, contd.:

settings, continu-  
ation

Item	Description
FP_UPVECTOR <i>orientation</i>	<p>Orientation of the flagpage</p> <p>Available values for <i>orientation</i>:</p> <ul style="list-style-type: none"><li>IN: The flagpage can be read when looking from outside to the document center.</li><li>NONE: The flagpage at the left or the right border can be read from the right, the flagpage at the top or the bottom border, can be read from the bottom.</li><li>OUT: The flagpage can be read when looking from the document center outwards.</li></ul> <p>Default: IN</p> <p> <b>Caution</b> - pdfstamp/pdfstamphft: FP_UPVECTOR is not supported by pdfstamp/pdfstamphft.</p>

## Terminology

---

---

### Adobe Acrobat Reader

	Product from Adobe Systems for viewing PDF files
Inscription	→Flagpage
Flagpage	Lettering line in the margin of the document
Header	File in ASCII format that contains items for configuring an output job for →PLOSSYS netdome
PDF Collection	contains one or more files. The embedded files may contain additional describing information (for example, sender, receiver, e-mail subject) which are displayed by Adobe Acrobat Reader in the search. PDF collections may contain folder structure information. The main file serves as cover sheet and contains the description of the additional information.
PDF Portfolio	corresponds to a PDF collection whose main file is only a dummy.
PLOSSYS netdome	Output management system from SEAL Systems
Stamp	Graphic element which is applied onto the document
UserUnit	→Adobe Acrobat Reader can only display PDF files up to a size of 14400 units (200 inch). If a UserUnit is set in the PDF file, all internal metric coordinates are divided by the value of the UserUnit. Because →Adobe Acrobat Reader and other viewers evaluate the UserUnit, the correct size is identified further on.
Watermark	Stamp applied as watermark behind the document

---

---

## Abbreviations

---

ASCII	American Standard Code for Information Interchange
DIN	German Institute of Standardization
GKS	Graphic Kernel System
HFT	Host Function Table
ISO	International Standards Organization
JPEG	Joint Photographic Experts Group
PDF	Adobe Portable Document Format
PDF/A	Adobe Portable Document Format
PNG	Portable Network Graphics
RGB	Red Green Blue
TIFF	Tagged Image File Format
XFA	XML Forms Architecture
XML	Extensible Markup Language
